Teachers' Retirement Board  
State of Montana  
1500 Sixth Avenue  
Helena, MT 59620-0139

Members of the Board:

In this report are submitted the results of the annual valuation of the assets and liabilities of the Teachers' Retirement System of Montana, prepared as of July 1, 2009.

The purpose of this report is to provide a summary of the funded status of the System as of July 1, 2009, to provide the Annual Required Contribution (ARC) and the accounting information under Governmental Accounting Standards Board Statements No. 25 and 27 (GASB 25 and 27). While not verifying the data at source, the actuary performed tests for consistency and reasonability. On the basis of this valuation, it is recommended that the Employer make contributions to the Retirement System at the rate of 14.07% of payroll for the fiscal year ending June 30, 2012, based on a 30-year amortization period.

The promised benefits of the System are included in the actuarially calculated contribution rates which are developed using the Entry Age Normal cost method. Four-year market related value of assets is used for actuarial valuation purposes. Gains and losses are reflected in the unfunded accrued liability that is being amortized by regular annual contributions as a level percentage of payroll, on the assumption that payroll will increase by 4.50% annually. The assumptions recommended by the actuary and adopted by the Board are in the aggregate reasonably related to the experience under the Fund and to reasonable expectations of anticipated experience under the Fund and meet the parameters for the disclosures under GASB 25 and 27. Following this valuation, an experience study will be performed over the four year period beginning July 1, 2006 ending July 1, 2009. Any recommended changes as a result of the experience study, will be adopted for the July 1, 2010 valuation.

We have prepared the Schedule of Funding Progress and Trend Information shown in the financial section of the Comprehensive Annual Financial Report, and all supporting schedules including the Schedule of Active Member Valuation Data, the Solvency Test and the Analysis of Financial Experience shown in the actuarial section of the Comprehensive Annual Financial Report. All historical information that references a valuation date prior to July 1, 2009 was prepared by the previous actuarial firm.

This is to certify that the independent consulting actuary is a member of the American Academy of Actuaries and has experience in performing valuations for public retirement systems, that the valuation was prepared in accordance with principles of practice prescribed by the Actuarial Standards Board, and that the actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, based on the current provisions of the retirement system and on actuarial assumptions that are internally consistent and reasonably based on the actual experience of the System.

Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

In our opinion, System has operated on an actuarially sound basis in the past. In order for the System to continue to operate in an actuarial sound manner, contributions equal to the ARC are necessary for future fiscal years. Assuming that these contributions are made to the System, from year to year in the future at the rates recommended on the basis of the successive actuarial valuations, the continued sufficiency of the retirement fund to provide the benefits called for under the System may be safely anticipated.

The Table of Contents, which immediately follows, outlines the material contained in the report.

Assets		
Actuarial value	\$ 2,762,194	\$ 3,159,135
Market value	2,301,829	2,993,393
Unfunded accrued liability	\$ 1,411,583	\$ 794,600
Funded Ratio	66.18%	79.90%
<b>CONTRIBUTIONS FOR FISCAL YEARS</b>		
<b>ENDING</b>	<b>2012*</b>	<b>2010 and 2011</b>
Total Normal Rate	10.69%	10.87%
Employee Contribution Rate	<u>7.15%</u>	<u>7.15%</u>
Employer Normal Rate	3.54%	3.72%
Employer Statutory Contribution Rate		
Normal Rate	3.54%	3.72%
UAL Rate	<u>6.42%</u>	<u>6.24%</u>
Total Rate	9.96%	9.96%
Amortization Period	Infinite	31.3
Required Increase in Statutory Contribution Rate	4.11%	0.17%
Employer ARC under GASB		
Normal Rate	3.54%	3.72%
UAL Rate	<u>10.53%</u>	<u>6.41%</u>
Total Rate	14.07%	10.13%
Amortization Period	30	30

\* The July 1, 2009 valuation will determine the ARC for the fiscal years ending June 30, 2012. The July 1, 2010 valuation will determine the ARC for the fiscal year ending June 30, 2013.

As a result of this actuarial valuation of the benefits in effect under the Montana Teachers' Retirement System as of July 1, 2009, we find the current schedule of contributions (shown in the "History of Legislated Contributions" below) is not sufficient to amortize the Unfunded Actuarial Accrued Liability (UAAL) of the Retirement System. The net Funded Ratio is 66.18%. A 30-year amortization period is the maximum acceptable amortization period specified in Statements No. 25 and 27 of the Governmental Accounting Standards Board (GASB). Therefore, when measured by that standard, the System is not actuarially sound.

History of Legislated Contributions  
(as a Percent of Pay)

	<u>Members</u>	<u>Participating Employers</u>	<u>State General Fund</u>	<u>Total</u>
Prior to July 1, 2007	7.15%	7.47%	0.11%	14.73%
July 1, 2007 to June 30, 2009	7.15%	7.47%	2.11%	16.73%
July 1, 2009 and after	7.15%	7.47%	2.49%	17.11%

**Contribution Increases to Amortize UAAL Over 30 Years**

A contribution increase of 4.11% of pay (17.11% to 21.22%) for the fiscal years ending June 30, 2012 is required to maintain the fund in an actuarial sound manner. The required increase will amortize the unfunded actuarial accrued liability (UAAL) over a 30 year period. The table below demonstrates the comparison ARC as recommended by the actuary and the current statutory contribution. It also shows the amount of additional contributions that will be necessary to maintain the System in an actuarial sound manner.

Valuation Date	Fiscal Year Ended for which ARC is Payable	ARC	Current Contribution	Expected Shortfall
July 1, 2008	June 30, 2010	10.13%	9.96%	\$1,200,000
July 1, 2008	June 30, 2011	10.13%	9.96%	\$1,300,000
July 1, 2009	June 30, 2012	14.07%	9.96%	\$32,100,000

**Calculations based on the Market Value of Assets**

MCA 19-20-201 requires this report to show how market performance is affecting the actuarial funding of the Retirement System. The July 1, 2009 market value of assets is \$460.4 million less than the actuarial value of assets due to a negative 20.80% market return in the year ended June 30, 2009. If the market value of assets was used, the amortization period would be infinite, and the net Funded Ratio would be 55.15%.

Based on market assets, a contribution increase of 7.54% of pay (17.11% to 24.65%) for the fiscal year ended June 30, 2012 is projected to maintain an amortization of the unfunded actuarial accrued liability over a 30 year period.

### Additional Details

MCA 19-20-604 states that the contribution from the State General Fund will be reduced by 0.11% when the amortization period of the System's unfunded actuarial accrued liability is 10 years or less according to the System's latest actuarial valuation.

The actuarial costs are calculated using the entry age actuarial cost method. This is the method used by most public plans. It is designed to provide a stable contribution rate as a percent of member pay. This actuarial valuation measures the adequacy of the contribution rates set in Montana State Law.

### Investment Experience

The market assets earned negative 20.80% net of investment and operating expenses. The actuarial assets earned negative 10.26% which is 18.01% less than the actuarial assumption of 7.75%. The return on the actuarial assets differs from the return on market assets because the actuarial value of assets spreads gains and losses over four years. The following chart compares the annual returns for the past ten years.

Year	Market Return	Actuarial Return	Market Return over Assumption*	Actuarial Return over Assumption*
7/1/1999 to 6/30/2000	7.80%	12.80%	(0.20)%	4.80%
7/1/2000 to 6/30/2001	(5.09)%	9.19%	(13.09)%	1.19%
7/1/2001 to 6/30/2002	(7.26)%	3.83%	(15.26)%	(4.17)%
7/1/2002 to 6/30/2003	6.16%	1.60%	(1.84)%	(6.40)%
7/1/2003 to 6/30/2004	13.31%	2.12%	5.31%	(5.88)%
7/1/2004 to 6/30/2005	8.04%	2.71%	0.29%	(5.04)%
7/1/2005 to 6/30/2006	8.91%	8.46%	1.16%	0.71%
7/1/2006 to 6/30/2007	17.64%	10.22%	9.89%	2.47%
7/1/2007 to 6/30/2008	(4.88)%	7.18%	(12.63)%	(0.57)%
7/1/2008 to 6/30/2009	(20.80)%	(10.26)%	(28.55)%	(18.01)%

\* The actuarial assumption was 8.0% through 6/30/2004 and 7.75% thereafter.

Asset gains or losses result when the return on the actuarial value of assets differs from the actuarial investment return assumption of 7.75% (8.0% before July 1, 2004). The chart above shows that the actuarial return on assets has under performed the assumption more than it has exceeded the assumption in the last ten years. These losses have led to the need for additional contributions.

On a market value basis the System earned \$401.5 million less than anticipated by the 7.75% assumption in the year ended June 30, 2008 and \$843.7 million less than anticipated by the 7.75% assumption in the year ended June 30, 2009. The net result as of July 1, 2009 is that the market value of assets is \$460.4 million less than the actuarial value of assets. This \$460.4 million in unrecognized asset losses, if not offset by future gains, will cause the contributions needed to amortize the UAAL in future valuations to increase even further. Therefore, to stay financially sound in the future, the System will need either (1) future gains such as asset returns over the new 7.75% assumption, or (2) an increase in contribution rates.

## **Recent Contribution Increases**

As shown in the “History of Legislated Contributions” at the beginning of this section the employer contributions from the General Fund has increased to 2.49% of pay as of July 1, 2009. The supplemental contribution to ensure university member benefits are funded by university employers was increased from 4.04% to 4.72% of Optional Retirement Plan (ORP) member pay at July 1, 2007. These additional contributions helped bring the amortization period of the System’s Unfunded Actuarial Accrued Liability (UAAL) under 30 years at July 1, 2007. Unfortunately poor asset performance for the two years ended June 30, 2009 now require contribution rate increase to maintain actuarial soundness and an amortization period within 30 years.

## **Amortization Period Changes**

The July 1, 2008 actuarial valuation calculated a 31.3 year amortization period for the Unfunded Actuarial Accrued Liability. If there were no assumption changes, or experience gains and losses, the amortization period would have been expected to decrease by 1.0 year to 30.3 at July 1, 2009. The experience gains and losses (primarily asset losses) from the year ending June 30, 2009 increased the amortization period. The resulting amortization period at July 1, 2009 is infinite.

## **Funding and Benefits Policy**

The Teachers’ Retirement System has adopted a Funding and Benefits Policy to provide general guidelines to help ensure decisions are made based on sound, consistent, and thoroughly examined criteria. The Funding and Benefits Policy includes guidance on the following topics:

### **1) Additional Funding**

- a) The Funding and Benefits Policy states: “Whenever the amortization period of the unfunded liabilities for two consecutive valuations are projected to exceed 30 years based on the market value of assets, or the funded ratio is less than 85%, and the Board cannot reasonably anticipate that the amortization period would decline or the funded ratio improve without an increase in funding sources, it is the obligation of the Board to recommend to the legislature that funding be increased and/or liabilities be reduced.”
- b) Analysis: The amortization period at July 1, 2009 is infinite based on actuarial assets and infinite based on market assets. Assuming experience follows the actuarial assumptions, the amortization period is projected to remain above 30 years based on both measures for some time to come. The net funded ratio is currently 66.18%. Therefore, the guidance in the Board’s Funding and Benefits Policy indicates the Board should “recommend to the legislature that funding be increased and/or liabilities be reduced.”

### **2) Ultimate Goal**

- a) The Funding and Benefits Policy states: “It is the ultimate goal of the TRB to eliminate the current Unfunded Actuarial Accrued Liability and to establish a Stabilization Reserve equal to at least 10% of the Actuarial Accrued Liability. Once the system has achieved this goal, any surplus funds that become available may be applied toward the cost of benefit enhancements and/or contribution reductions, provided, sufficient reserves are retained to reasonably allow for adverse experience and the contribution rates remain at least 1 percent above the normal cost.”

- b) Analysis: This goal is currently a long way off. This is represented by infinite amortization periods using both actuarial and market assets. Discipline will be required by all parties concerned to reach this goal, and will have to include contribution increases to maintain the amortization period within 30 years.

3) Benefit Enhancements

- a) The Funding and Benefits Policy states: “Proposed benefit enhancements must include additional funding sufficient to cover any increase in the normal cost and to amortize any increase in unfunded liabilities over a period not to exceed 25 years. In addition, as of the most recent actuarial valuation, the funded ratio must be 85% or greater before the Board will support legislation to enhance benefits.”
- b) Analysis: Since the net funded ratio at July 1, 2009 of 66.18% is below 85% the Board's Funding and Benefits policy does not currently support enhanced benefits, even if funding of increased unfunded liabilities over 25 years is included.

**Sensitivity to Future Experience**

The valuation results are projections based on the actuarial assumptions. Actual experience will differ from these assumptions, either increasing or decreasing the ultimate cost. The following illustrations provide simple analyses on how the costs are affected by the various assumptions. We have amortized changes in the Unfunded Actuarial Accrued Liability (UAAL) over 25 years for the purpose of these illustrations.

Investment Return – The investment return assumption generally has the largest impact on the funding of the System.

Impact of Assuming 0.5% Lower Investment Return	
	<u>Funded Ratio</u>
Current Assumption 7.75%	66.18%
Lower Assumption 7.25%	<u>62.62%</u>
Change	-3.56%
	<u>Implied Contribution Increase / (Decrease)</u>
Normal Cost Rate	1.28%
25 year amortization of UAAL	<u>1.89%</u>
Total	3.17%
Impact of Assuming 0.5% Higher Investment Return	
	<u>Funded Ratio</u>
Current Assumption 7.75%	66.18%
Higher Assumption 8.25%	<u>69.82%</u>
Change	3.64%
	<u>Implied Contribution Increase / (Decrease)</u>
Normal Cost Rate	-1.11%
25 year amortization of UAAL	<u>-1.92%</u>
Total	-3.03%

Retirement – The age when members are expected to retire is another key actuarial assumption. This is particularly true for systems that have early provisions for unreduced retirement such as TRS' provision for full retirement after 25 years of service at any age. If members retire earlier than anticipated by the actuarial assumptions the System's funding may suffer. The illustration below represents the cost of benefits if all members retired as soon as they were eligible for a full benefit at 25 years of service or at age 60.

Impact of Assuming All Members Retiring at the Earlier of 25 Years of Service or Age 60	
	<u>Funded Ratio</u>
Current Assumption	66.18%
100% Retirement at 25/60	<u>61.43%</u>
Change	-4.75%
	<u>Implied Contribution Increase / (Decrease)</u>
Normal Cost Rate	1.03%
25 year amortization of UAAL	<u>3.69%</u>
Total	4.72%

The future funding status of the System will be determined by the System's experience. The System's actual asset returns and retirement rates, as well as member longevity, salary increases, withdrawal rates, disability rates and future legislation will all impact the funding status of the System. The entry age normal cost method and four year smoothing of asset gains and losses will help to provide a more orderly funding of the System's liabilities, but will not change the actual experience. The amortization period of the Unfunded Actuarial Accrued Liability is not likely to decrease by the expected 1.0 year with each passing actuarial valuation. Instead, the amortization period is expected to decrease more or less than 1.0 years each year, reflecting gains and losses due to experience different than the actuarial assumptions.

### **Assumption Changes**

Active member demographic experience was examined in the prior actuaries experience study dated April 29, 2008. The Retirement Board adopted the recommendations presented in the report. There were no assumption changes since the July 1, 2008 valuation.

The next experience study is currently planned to take place after the July 1, 2009 valuation and be a comprehensive experience study examining all methods and assumptions. Recommended changes will be used for the first time in the July 1, 2010 valuation.

### **Benefit Changes**

No benefit changes are reflected in this valuation.

### **Contribution Changes**

The contribution rate changes are documented at the beginning of this summary.

### **Method Changes**

No changes in methods as reflected in this valuation.

## Impact of Changes

The following table summarizes how experience has changed the Unfunded Actuarial Accrued Liability (UAAL) since the July 1, 2008 Actuarial Valuation. Further detail can be found in Table 19.

### Changes in the Unfunded Actuarial Accrued Liability (UAAL)

(In millions)

July 1, 2008 Valuation UAAL funded by TRS contributions	\$ 794.6
Expected Decrease	\$ 3.9
Transition Increase	<u>35.2</u>
Total Expected Increase	<u>\$ 39.1</u>
Expected July 1, 2009 UAAL	\$ 833.7
Experience Loss on Actuarial Liabilities	\$ 16.0
Experience Loss on Actuarial Assets	<u>561.9</u>
Total Experience Loss	<u>\$ 577.9</u>
July 1, 2009 Valuation UAAL funded by TRS contributions	\$ 1,411.6

## Teachers' Retirement System State of Montana

### Summary

- The System's market value investment return of -20.80% for the year ended June 30, 2009 is 28.55% less than the actuarial assumption of 7.75%. This represents an asset loss of \$843.7 million due to investment return less than anticipated. The actuarial value of assets is not allowed to be greater than 120% or less than 80% of the market value of assets. As of July 1, 2009, the market value of assets was \$2,301.8 million. As of July 1, 2009 the preliminary actuarial value of assets was \$3,067.7 million. Since the preliminary actuarial value of assets exceeded 120% of the market value, the actuarial value was determined to be 120% of the market value of assets. Since the initial loss the July 1, 2009 market value of assets is \$460.4 million less than the actuarial value of assets. This \$460.4 million loss will be recognized in future actuarial valuations unless it is offset by returns larger than the 7.75% assumption.
- The amortization period of the Unfunded Actuarial Accrued Liability is Infinite. The guidance in the Board's Funding and Benefits Policy indicates the Board should "recommend to the legislature that funding be increased and/or liabilities be reduced." The Policy's ultimate goal is to increase the current net funded ratio of 66.18% above 110% to encourage stable contribution rates.
- The funding of the retirement system will be impacted by future experience which will sometimes be more favorable than the actuarial assumptions and sometimes less favorable. In particular, investment returns larger and smaller than the 7.75% assumption are expected to have significant impacts on the System's funding progress. In the long term, the favorable experience is needed to offset the less favorable experience. This is the reason for using an actuarial value of assets that smoothes gains and losses over four years.

## **Teachers' Retirement System State of Montana**

### **Section 2**

#### **Assets**

In many respects, an actuarial valuation can be regarded as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is July 1, 2009. On that date, the assets available for the payment of benefits are appraised. These assets are compared with the actuarial liabilities. The actuarial process thus leads to a method of determining what contributions by members and their employers are needed to strike a balance.

The asset valuation method being used is a four-year smoothing method. The expected return is determined each year based on the beginning of year market value and actual cash flows during the year. Any difference between the expected market value return and the actual market value return is recognized evenly over a period of four years. The actuarial value of assets is not allowed to be greater than 120% or less than 80% of the market value of assets.

Table 1 lists the assets held and their market value for the past two years. Table 2 summarizes the fund's activity during the past two years. Table 3 summarizes the determination of the actuarial value of assets. Table 4 summarizes historical asset returns for the last 15 years including the amount recognized by the actuarial asset valuation method which was greater or lesser than the actuarial investment return assumption.

Market Value of Assets vs. Actuarial Value of Assets

## **Teachers' Retirement System State of Montana**

### **Section 3**

#### **Actuarial Present Value of Future Benefits**

In the previous section, an actuarial valuation was related to an inventory process, and an analysis was given of the inventory of assets of the System as of the valuation date. In this section, the discussion will focus on the commitments of the System, which will be referred to as its actuarial liabilities.

Table 6 contains an analysis of the actuarial present value of all future benefits for contributing members, for former contributing members, and for beneficiaries. The analysis is given by type of benefit.

The actuarial liabilities summarized in Table 6 include the actuarial present value of all future benefits expected to be paid with respect to each member covered as of the valuation date. For an active member, this value includes a measure of both benefits already earned and future benefits to be earned. Thus, for all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and, if an optional benefit is chosen, for the lives of their surviving beneficiaries.

The actuarial valuation does not recognize liabilities for employees who become members and participate in the System after the valuation date.

## **Teachers' Retirement System State of Montana**

### **Section 4**

#### **Employer Contributions**

In the previous two sections, attention has been focused on the assets and the present value of all future benefits of the System. A comparison of Tables 3 and 6 indicates that there is a shortfall in current actuarial assets to meet the present value of all future benefits for current members and beneficiaries.

In an active system, there will always be a difference between the assets and the present value of all future benefits. An actuarial valuation sets a schedule of future contributions that will deal with this funding in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. For this valuation, the entry age actuarial cost method has been used. A description of the entry age actuarial cost method is provided in Appendix A. Under this method, or essentially any actuarial cost method, the contributions required to meet the difference between current assets and the present value of all future benefits are allocated each year between two elements:

A normal cost amount, which ideally is relatively stable as a percentage of salary over the years;

and an amount which is used to amortize is the UAAL.

The two items described above, normal cost and UAAL, are the keys to understanding the actuarial cost method. Let us first discuss the normal cost.

The normal cost is the theoretical contribution rate, which will meet the ongoing costs of a group of average new employees. Suppose that a group of new employees were covered under a separate fund from which all benefits and to which all contributions and associated investment return were to be paid. Under the entry age actuarial cost method, the normal cost contribution rate is that level percentage of pay which would be exactly right to maintain this fund on a stable basis. If experience were to follow the actuarial assumptions exactly, the fund would be completely liquidated with the last payment to the last survivor of the group.

We have determined the normal cost rates separately by type of benefit under the System. These are summarized in Table 7. In Table 7 we also provide a summary of the member and employer statutory and ARC under GASB.

The term "fully funded" is often applied to a system where contributions for everyone at the normal cost rate will fully pay for the benefits of existing as well as new employees. Often, systems are not fully funded, either because of benefit improvements in the past that have not been completely paid for or actuarial deficiencies that have occurred because experience has not been as favorable as anticipated. Under these circumstances, a UAAL exists.

Table 8 shows how the UAAL was derived for the System. Lines A and B show, respectively, the total present value of future benefits and the portion of the future liability that is expected to be paid from future normal cost contributions, both employer and employee. Line C shows the actuarial accrued liability. Line E shows the amount of assets available for benefits. Line F shows the UAAL.

The amortization of the UAAL assumes university supplemental contributions are made as a percent of pay for members of the Optional Retirement Plan (ORP) until June 30, 2033. Under Section 19-20-621, periodic separate valuations are to be performed to measure the liabilities of benefits to be paid under the Teachers' Retirement System (TRS) for Montana University System (MUS) members. The MUS valuations calculate contribution rates that finance the university member benefits with university contributions and reflect actual experience including investment returns. Therefore the university supplemental contribution rate has varied from time to time. Recently it has varied as follows:

<u>Supplemental University Contribution Rate</u>	<u>Fiscal Years Ending</u>
2.81%	June 30, 1998
3.12%	June 30, 1999
3.42%	June 30, 2000
3.73%	June 30, 2001
4.04%	June 30, 2002 to June 30, 2007
4.72%	June 30, 2008 to June 30, 2033

The value of future supplemental university contributions included in the July 1, 2009 TRS valuation is \$157.2 million based on a 4.72% contribution rate until July 1, 2033.

In Table 9 we show the projected payroll basis for the amortization of the UAAL.

The UAAL at any date after establishment of a system is affected by any actuarial gains or losses arising when the actual experience of the system varies from the experience anticipated by the actuarial assumptions used in the valuations. To the extent actual experience as it develops differs from the assumptions used, so also will the actual emerging costs differ from the estimated costs. The impact of these differences in actual experience from the assumptions is included in Section 1, the Summary of Findings.

\* Paid by contributions to TRS made as a percentage of the salaries of the participants in the Optional Retirement Plan (ORP) to fund Montana University System member benefits. The percentage of salary will be a level 4.72% for the Fiscal Years through 2033.

**Teachers' Retirement System  
State of Montana**

**Section 5**

**Cash Flows**

The fundamental equation for funding a retirement system is that benefits and administrative expenses must be provided for by contributions (past and future) and investment income. When a retirement system matures, benefits and administrative expenses often exceed contributions. In this case we say the system has a “negative cash flow.” Mature systems are characterized by negative cash flows and large pools of assets. This is natural. Actuarial funding is designed to accumulate large pools of assets which will in turn provide investment income and finance negative cash flows when systems mature. If the fund is looked at as a whole, investment income is usually larger than the difference between contributions and benefit payments. The retirement system’s investment strategy should maximize potential returns at a prudent level of risk while providing for needed cash flows.

Table 9 shows the System had a negative cash flow for the year ended June 30, 2009. The System’s total cash flow including benefits payments, administrative expenses and investment earnings was \$(691.5) million. Of the \$(691.5) million, \$(612.8) million was due to investment returns.

Table 10 shows that at the current statutory contribution rate and if the System’s assets earn the assumed investment rate of return of 7.75%, the System has a temporary positive cash flow that will eventually become negative after reflecting benefit payments, contributions and investment earnings. This is due to the fact that the current statutory contribution is no longer adequate to fund the System in an actuarial sound manner.

Table 11 shows that if the ARC is contributed to the System as recommended by the Actuary and the System’s assets earn the assumed rate of 7.75%, the System is projected to have a positive cash flow in all future years.

As long as the System had a positive cash flow, there was no need to plan where the funds would come from to pay benefits since benefits could be paid by incoming contributions. A negative cash flow, as defined above, requires planning what funds will be used to pay the difference between benefits and contributions. We are providing these projections to aid in developing the investment strategy for the System’s assets.

**Actuarial Gains or Losses**

An analysis of actuarial gains or losses is performed in conjunction with all regularly scheduled valuations.

The results of our analysis of the financial experience of the System in the three most recent regular actuarial valuations are presented in Table 14. Each gain or loss shown represents our estimate of how much the given type of experience caused the Unfunded Actuarial Accrued Liability or Funding Reserve to change in the period since the previous actuarial valuation.

Gains and losses shown due to demographic sources are approximate. Demographic experience is analyzed in greater detail in our periodic assumption studies.

Non-recurring gains and losses result from changes in the actuarial assumptions and benefit improvements.

\* Effects related to gains are shown in parentheses. Numerical results are expressed as a (decrease) increase in the Unfunded Actuarial Accrued Liability (UAAL). Gains decrease the UAAL and losses increase the UAAL.

## **Teachers' Retirement System State of Montana**

### **Appendix A**

#### **Actuarial Procedures and Assumptions**

Retirement, disablement and termination of employment assumptions have been updated to reflect the Retirement Board's actions at the May 8, 2008 Retirement Board Meeting. These actions reflect the recommended changes in the 2001-2007 Investigation of Active Member Demographic Experience report.

The current asset valuation method was adopted for the July 1, 2007 valuation.

The current mortality assumptions were adopted for the July 1, 2006 valuation.

Economic assumptions were reviewed in the 2004 Investigation of Experience Study.

The next experience study will be performed after the July 1, 2009 valuation based on the prior valuations of July 1, 2006, July 1, 2007, July 1, 2008 and July 1, 2009. The assumptions adopted by the board based on the experience study will be first utilized in the July 1, 2010 valuation.

Tables A-3 through A-6 give rates of decrement for service retirement, disablement, mortality, and other terminations of employment.

#### **Actuarial Cost Method**

The actuarial valuation was prepared using the entry age actuarial cost method. Under this method, the actuarial present value of the projected benefits of each individual included in the valuation is allocated as a level percentage of the individual's projected compensation between entry age and assumed exit. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The normal cost was first calculated for each individual member. The normal cost rate is defined to equal the total of the individual normal costs, divided by the total pay rate.

The portion of this actuarial present value not provided for at a valuation date by the sum of (a) the actuarial value of the assets and (b) the actuarial present value of future normal costs is called the UAAL. The UAAL is amortized as a level percentage of the projected salaries of present and future members of the System.

#### **Records and Data**

The data used in the valuation consist of financial information; records of age, sex, service, salary, contribution rates, and account balances of contributing members; and records of age, sex, and amount of benefit for retired members and beneficiaries. All of the data were supplied by the System and are accepted for valuation purposes without audit.

### **Replacement of Terminated Members**

The ages at entry and distribution by sex of future members are assumed to average the same as those of the present members they replace. If the number of active members should increase, it is further assumed that the average entry age of the larger group will be the same, from an actuarial standpoint, as that of the present group. Under these assumptions, the normal cost rates for active members will not vary with the termination of present members.

### **Employer Contributions**

At the time of this valuation, the total employer contribution rate for normal costs and amortization of the UAAL was 9.96% of members' salaries. In accordance with MCA 19-20-604, the employer contribution rate will be reduced by 0.11% when the amortization period of the System's UAAL is 10 years or less according to the System's latest actuarial valuation.

### **Administrative and Investment Expenses**

The administrative and investment expenses of the System are assumed to be funded by investment earnings in excess of 7.75% per year.

### **Valuation of Assets - Actuarial Basis**

The actuarial asset valuation method spreads asset gains and losses over four years. The expected return is determined each year based on the beginning of year market value and actual cash flows during the year. Any difference between the expected market value return and the actual market value return is recognized evenly over a period of four years. The gains and losses are measured starting with the year ended June 30, 2007. The actuarial value of assets is not allowed to be greater than 120% or less than 80% of the market assets. (Adopted effective July 1, 2007.)

### **Investment Earnings**

The annual rate of investment earnings of the assets of the System is assumed to be 7.75% per year, compounded annually. (Adopted effective July 1, 2004)

### **Interest on Member Contributions**

Interest on member contributions is assumed to accrue at a rate of 5% per annum, compounded annually. This assumption was set as of July 1, 2004.

### **Postretirement Benefit Increases**

On January 1 of each year, the retirement allowance payable must be increased by 1.5% if the retiree has received benefits for at least 36 months prior to January 1 of the year in which the adjustment is to be made.

### **Future Salaries**

The rates of annual salary increase assumed for the purpose of the valuation are illustrated in Table A-2. In addition to increases in salary due to merit and longevity, this scale includes an assumed 4.5% annual rate of increase in the general wage level of the membership. The merit and longevity increases for the MUS members did not show a pattern of increasing or decreasing with service at the time of our most recent study. Therefore, the MUS members have a flat 1% merit and longevity assumption. The general wage increase assumption was adopted July 1, 2004 and the merit and longevity scales were adopted July 1, 2002.

Montana University System (MUS) members are assumed to have a 0.63% higher average final compensation to account for the larger than average annual compensation increases observed in the years immediately preceding retirement.

### **Service Retirement**

Table A-3 shows the annual assumed rates of retirement among members eligible for service retirement. Separate rates are used when a member is eligible for reduced benefits, for the first year a member is eligible for full benefits, and for the years following the first year a member is eligible for full benefits. The rates for General Members were adopted July 1, 2008. The rates for University Members were adopted July 1, 2008.

### **Disablement**

The rates of disablement used in this valuation are illustrated in Table A-4. These rates were adopted July 1, 2008.

### **Mortality**

The mortality rates used in this valuation are illustrated in Table A-5. A written description of each table used is included in Table A-1. These rates were adopted July 1, 2006.

### **Other Terminations of Employment**

The rates of assumed future withdrawal from active service for reasons other than death, disability or retirement are shown for representative ages in Table A-6. These rates were adopted July 1, 2008.

### **Benefits for Terminating Members**

Members terminating with less than five years of service are assumed to request an immediate withdrawal of their contributions with interest. Table A-7 shows the assumed probability of retaining membership in the System among members terminating with five or more years of service. These rates were adopted July 1, 2002.

We estimated the present value of future benefits for terminated vested members based on the greater of the present value of their deferred benefit at age 60 or their available contribution account.

### **Part-Time Employees**

The valuation data for active members identify part-time members, but give no indication as to the number of hours worked. As done in the past, we imputed a "part-time percentage" by comparing the pay received with their annual equivalent full-time salary. Their accumulated service was divided by this percentage to reflect their full benefit. Part-time members earning less than \$1,000 during the last year were valued at their current member contribution balance.

### **Optional Retirement Program**

ORP payroll as of June 30, 2009 was \$173,082,817.

Effective for fiscal years after June 30, 2007 until June 30, 2033, the Optional Retirement Program contribution rate is 4.72%, pursuant to MCA 19-20-621.

### **Buybacks, Purchase of Service, and Military Service**

The active liabilities and normal cost (excluding liabilities and normal cost in respect of Return of Employee Contributions) were increased to 100.5% of their original value to fund this additional service based on a study of the System's experience for the five calendar years 1995 through 1999. Effective July 1, 2008.

### **Probability of Marriage**

If death occurs in active status, all members are assumed to have an eligible surviving spouse and two children. The spouse is assumed to be the same age as the member.

### **Records with no Birth Date**

New records with no birth date are assumed to be 25 years old. Records that are not new and have no birth date used the same birth date as the prior year's valuation.

**Appendix B**

**Summary of Benefit Provisions**

Effective Date	September 1, 1937.
Vesting Period	Five years. No benefits are payable unless the member has a vested right, except the return of employee contributions with interest.
Final Compensation	Average of highest three consecutive years of earned compensation.
Normal Form of Benefits	Life only annuity. All benefits cease upon death; however, in no event will the member receive less than the amount of employee contributions with interest.
Normal Retirement Benefits	
Eligibility:	25 years of service or age 60 and five years of service.
Benefit:	The retirement benefit is equal to 1/60 of final compensation for each year of service.
Early Retirement Benefits	
Eligibility:	Five years of service and age 50.
Benefit:	The retirement benefit is calculated in the same manner as described for normal retirement, but the benefit is reduced 1/2 of 1% for each of the first 60 months early and 3/10 of 1% for each of the next 60 months early.

#### Death Benefit

Eligibility: Five years of service.

Benefit: The death benefit is equal to 1/60 of final compensation for each year of service accrued at date of death, with an actuarial adjustment based on the relation of the member's age at death to the beneficiary's age. A monthly benefit of \$200 is paid to each child until age 18. In addition, a lump-sum benefit of \$500 is paid upon the death of an active or retired member.

#### Disability Benefit

Eligibility: Five years of service.

Benefit: The disability benefit is equal to 1/60 of final compensation for each year of service accrued at date of disability. The minimum benefit is 1/4 of the final compensation.

#### Withdrawal Benefits

With less than five years of service, the accumulated employee contributions with interest are returned. With more than five years, the member may elect a refund of contributions with interest or leave the contributions and interest in the System and retain a vested right to retirement benefits.

#### Contributions

Member: 7.15% of compensation.  
Employer: 9.96% of compensation.

MCA 19-20-604 specifies that the employer contribution rate will be reduced by 0.11% when the amortization period of the System's UAAL is 10 years or less according to the System's latest actuarial valuation.

#### Interest on Member Contributions

Interest on member contributions is currently being credited at a rate of 1.0% per annum.

#### Cost-of-Living Adjustments

On January 1 of each year, the retirement allowance payable must be increased by 1.5% if the retiree has received benefits for at least 36 months prior to January 1 of the year in which the adjustment is to be made.

**Teachers' Retirement System  
State of Montana**

**Appendix C**

**Valuation Data**

This valuation is based upon the membership of the System as of July 1, 2009. Membership data were supplied by the System and accepted for valuation purposes without audit. However, tests were performed to ensure that the data are sufficiently accurate for valuation purposes.

<u>Active Members</u>	<u>Number</u>	<u>Annual Salaries in Millions</u>
Full-Time Members	12,673	\$ 613.1
Part-Time Members*	<u>5,270</u>	<u>69.9</u>
Total Contributing Members*	17,943	\$ 683.0
Active Members with Annual Compensation less than \$1,000	513	
Total Active Members	18,456	

\* Excludes part-time members with annual compensation less than \$1,000.

Table C-1 contains summaries of the data for contributing members. For full-time members, values shown in the tables are the numbers of members and their total and average annual salaries. For part-time members, only the numbers of members are shown.

Table C-2 presents distributions of the following:

- Members receiving service retirement benefits.
- Members receiving disability retirement benefits.
- Survivors of deceased retired members receiving benefits.
- Survivors of deceased active members.
- Child beneficiaries.
- Terminated vested members.

Table C-3 is a reconciliation of membership data from July 1, 2008 to July 1, 2009.

The following is a summary of retired members and beneficiaries currently receiving benefits:

<u>Type of Annuitant</u>	<u>Number</u>	<u>Annual Benefits in Thousands</u>	<u>Average Annual Benefits</u>
Service Retirement	10,471	\$ 202,253	\$ 19,316
Survivors of Deceased Retired Members	<u>925</u>	<u>11,250</u>	<u>12,162</u>
Total Service Retirement (including survivors)	11,396	\$ 213,502	\$ 18,735
Disability Retirement	206	2,006	9,738
Survivors of Deceased Active Members	404	3,686	9,124
Child Beneficiaries	<u>30</u>	<u>72</u>	<u>2,400</u>
Total Annuitants	12,036	\$ 219,266	\$ 18,218

<u>Terminated Members with Contributions Not Withdrawn</u>	<u>Number</u>
Vested Terminated Members	1,640
Non-Vested Terminated Members	<u>9,868</u>
Total Terminated Members	11,508

\* The UAAL rate is the amount available to amortize the UAAL. It is equal to the total contribution rate, minus the normal cost rate.

\*\* The 1999 Legislation which passed the 1.5% GABA, also added a 0.11% state general fund contribution.

## **Teachers' Retirement System State of Montana**

### **Appendix E**

#### **Glossary**

The following definitions are largely excerpts from a list adopted in 1981 by the major actuarial organizations in the United States. In some cases the definitions have been modified for specific applicability to the Teachers' Retirement System Retirement System. Defined terms are capitalized throughout this Appendix.

#### **Accrued Benefit**

The amount of an individual's benefit (whether or not vested) as of a specific date, determined in accordance with the terms of a pension plan and based on compensation and service to that date.

#### **Actuarial Accrued Liability**

That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.

#### **Actuarial Assumptions**

Assumptions as to the occurrence of future events affecting pension costs, such as: mortality, withdrawal, disablement, and retirement; changes in compensation, rates of investment earnings, and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

#### **Actuarial Cost Method**

A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

#### **Actuarial Gain (Loss)**

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions during the period between two Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.

## **Appendix E (continued)**

### **Actuarial Present Value**

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions.

### **Actuarial Valuation**

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a pension plan.

### **Actuarial Value of Assets**

The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.

### **Actuarially Equivalent**

Of equal Actuarial Present Value, determined as of a given date with each value based on the same set of Actuarial Assumptions.

### **Amortization Payment**

That portion of the pension plan contribution which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

### **Entry Age Actuarial Cost Method**

A method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.

### **Market Value of Assets**

The fair value of cash, investments and other property belonging to a pension plan that could be acquired by exchanging them on the open market.

### **Normal Cost**

That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method.

## **Appendix E (continued)**

### **Projected Benefits**

Those pension plan benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits.

### **Unaccrued Benefit**

The excess of an individual's Projected Benefits over the Accrued Benefits as of a specified date.

### **Unfunded Actuarial Accrued Liability**

The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.
