

Teachers' Retirement System of the State of Montana

Annual Valuation of the Retirement System

Prepared as of July 1, 2024

September 20, 2024

Teachers' Retirement Board
State of Montana
P.O. Box 200139
Helena, MT 59620-0139

Members of the Board:

In this report are submitted the results of the annual valuation of the assets and liabilities of the Teachers' Retirement System of Montana (TRS), prepared as of July 1, 2024.

The purpose of this report is to provide a summary of the funded status of the System as of July 1, 2024. While not verifying the data at source, the actuary performed tests for consistency and reasonability. The valuation indicates that the statutory contribution rate reflecting all anticipated contribution increases is sufficient to amortize the unfunded accrued liability within a 21-year period.

The promised benefits of the System are included in the actuarially calculated contribution rates which are developed using the Entry Age Normal cost method. Four-year market related value of assets is used for actuarial valuation purposes. Gains and losses are reflected in the unfunded accrued liability that is being amortized by regular annual contributions as a level percentage of payroll, on the assumption that payroll will increase by 3.25% annually. The assumptions recommended by the actuary and adopted by the Board are in the aggregate reasonably related to the experience under the Fund and reasonable expectations of anticipated experience under the Fund.

In order to prepare the results in this report, we have utilized actuarial models that were developed to measure liabilities and develop actuarial costs. These models include tools that we have produced and tested, along with commercially available valuation software that we have reviewed to confirm the appropriateness and accuracy of the output. In utilizing these models, we develop and use input parameters and assumptions about future contingent events along with recognized actuarial approaches to develop the needed results.

This is to certify that the undersigned are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein. This also certifies that the undersigned have experience in performing valuations for public retirement systems, that the valuation was prepared in accordance with principles of practice prescribed by the Actuarial Standards Board, and that the actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, based on the current provisions of the retirement system and on actuarial assumptions that are internally consistent and reasonably based on the actual experience of the System.

Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

The Table of Contents, which immediately follows, outlines the material contained in the report.

Respectfully submitted,

| Total Rate | 11.96% | 11.96% |
| Amortization Period | 21 Years | 24 Years |

SECTION 1 – SUMMARY OF FINDINGS

As a result of this actuarial valuation of the benefits in effect under the Montana Teachers' Retirement System as of July 1, 2024, the statutory employer contributions are sufficient to amortize the Unfunded Actuarial Accrued Liability (UAAL) of the Retirement System within 21 years. The Funded Ratio is 74.26%.

The table below shows a history of the legislated contribution rates as a percent of pay. In addition to these contributions the State will contribute \$25 million annually to the System payable July 1st of each year.

Finally, MCA 19-20-605 requires each employer to contribute 9.85% of total compensation paid to all re-employed TRS retirees employed in a TRS reportable position. Pursuant to MCA 19-20-609, this amount shall increase by 1.00% for fiscal year 2014 and increase by 0.10% each fiscal year through 2024 until the total employer contribution is equal to 11.85% of re-employed retiree compensation.

History of Legislated Contributions (as a Percent of Pay)

Calculations based on the Market Value of Assets

MCA 19-20-201 requires this report to show how market performance is affecting the actuarial funding of the Retirement System. The July 1, 2024 market value of assets is \$65.4 million less than the actuarial value of assets. This is due to the smoothing of investment gains and losses over a four-year period. If the market value of assets was used, the amortization period would be 23 years, and the Funded Ratio would be 73.33%.

Additional Details

MCA 19-20-604 states that the contribution from the State General Fund will be reduced by 0.11% when the amortization period of the System's UAAL is 10 years or less according to the System's latest actuarial valuation.

Based on the current statutory funding rate, the amortization period as of the valuation date is 21 years. The 21-year period is likely longer than what will actually occur if all assumptions are met due to the snapshot valuation not reflecting the declining normal cost rate from new lower cost members. Contributions are developed with the intent of being level as a percentage of covered payroll, assuming the number of active members remains stable. Furthermore, the funding policy is expected to accumulate sufficient assets to make all future benefit payments as they become due if all assumptions are met. Actuarial Standard of Practice Number 4 (ASOP 4) requires the disclosure of a reasonable actuarial determined contribution rate. The current statutory funding rate is expected to fully fund the plan and likely complies with the guidelines of ASOP 4. While there are potentially other reasonable actuarially determined contribution rates, in our professional judgement, one other reasonable actuarially determined contribution rate would be 12.23%, which is based on a closed 20-year funding period.

SECTION 1 – SUMMARY OF FINDINGS

The actuarial costs are calculated using the entry age actuarial cost method. This is the method used by most public plans. It is designed to provide a stable contribution rate as a percent of member pay. This actuarial valuation measures the adequacy of the contribution rates set in Montana State Law.

Investment Experience

The market assets earned 8.89% net of investment and operating expenses. As a result of cumulative unrecognized gains, the actuarial assets earned 9.09% which is 1.79% more than the actuarial assumption of 7.30%. The return on the actuarial assets differs from the return on market assets because the actuarial value of assets spreads gains and losses over four years. The chart below shows the annual returns for the past ten years.

| Year | Market Return | Actuarial Return | Market Return over Assumption | Actuarial Return over Assumption |
|-----------------------|---------------|------------------|-------------------------------|----------------------------------|
| 7/1/2014 to 6/30/2015 | 4.57% | 9.59% | (3.18)% | 1.84% |
| 7/1/2015 to 6/30/2016 | 2.08% | 8.79% | (5.67)% | 1.04% |
| 7/1/2016 to 6/30/2017 | 11.92% | 8.24% | 4.17% | 0.49% |
| 7/1/2017 to 6/30/2018 | 8.82% | 6.85% | 1.07% | (0.90)% |
| 7/1/2018 to 6/30/2019 | 5.69% | 7.00% | (1.81)% | (0.50)% |
| 7/1/2019 to 6/30/2020 | 2.72% | 7.00% | (4.78)% | (0.50)% |
| 7/1/2020 to 6/30/2021 | 27.73% | 10.68% | 20.23% | 3.18% |
| 7/1/2021 to 6/30/2022 | (4.13)% | 8.14% | (11.63)% | 0.64% |
| 7/1/2022 to 6/30/2023 | 8.30% | 7.66% | 1.00% | 0.36% |
| 7/1/2023 to 6/30/2024 | 8.89% | 9.09% | 1.59% | 1.79% |

Asset gains or losses result when the return on the actuarial value of assets differs from the actuarial investment return assumption of 7.30% effective July 1, 2022.

The net result as of July 1, 2024 is that the market value of assets is \$65.4 million less than the actuarial value of assets. This \$65.4 million in unrecognized asset losses will either offset any future investment gains or if there are none, increase the amortization period of the UAAL in future valuations.

Recent Contribution Increases

The Montana University System Retirement Program (MUS-RP) supplemental contribution ensures university member benefits are funded by university employers. The supplemental contribution was increased from 4.04% to 4.72% of MUS-RP member pay at July 1, 2007. The valuation that determined the 4.72% contribution rate of MUS-RP member pay was based on the valuation completed as of July 1, 2006. The most recent MUS-RP valuation completed as of July 1, 2024 indicated an increase is needed in the supplemental contribution rate from 4.72% to 14.21% of MUS-RP member compensation rate.

MCA 19-20-608 and MCA 19-20-609 dictate that employers and members are required to make supplemental contributions if the funded ratio of the System is less than 90%. Since the funded ratio is currently 74.26%, Tier One Members are required to contribute an additional 1% of compensation. The individual employers are required to contribute an additional 1% of compensation. The employer contribution shall increase by an additional 0.1% each year following July 1, 2013 until the total employer supplemental contribution is equal to 2% of compensation.

MCA 19-20-605 requires each employer to contribute 9.85% of total compensation paid to all re-employed TRS retirees employed in a TRS reportable position. Pursuant to MCA 19-20-609, this amount shall increase by 1.00% for fiscal year 2014 and increase by 0.10% each fiscal year through 2024 until the total employer contribution is equal to 11.85% of re-employed retiree compensation.

Amortization of the UAAL

The July 1, 2023 actuarial valuation calculated a 24-year amortization period for the UAAL. The resulting amortization period at July 1, 2024 is 21 years. The amortization period anticipates future State General Fund contributions will decrease by 0.11% when the amortization period of the System's UAAL is 10 years or less. Future decreases in the Employer and Member Supplemental Contributions are not anticipated.

Funding and Benefits Policy

The Teachers' Retirement System has adopted a Funding and Benefits Policy to provide general guidelines to help ensure decisions are made based on sound, consistent, and thoroughly examined criteria. The Funding and Benefits Policy includes guidance on the following topics:

1) Additional Funding

a) The Funding and Benefits Policy states:

- “1. If the amortization period is greater than 30 years, the actuary will recommend the single contribution rate increase that can reasonably expect to fully amortize the UAAL over a closed 30-year period effective July 1, following the next regular legislative session.
2. If the amortization period is less than 30 years, but greater than 0, and it is projected to continue to decline over the remainder of the closed period, the actuary will not recommend a change in the statutory contribution rates.
3. If the amortization period is less than 30 years, but has increased over prior valuations and is projected to continue to grow, the actuary will recommend a contribution rate increase that is reasonably expected to reverse the recent trend and reestablish a closed amortization period equal to that of the last valuation.”

2) Analysis: The amortization period as of July 1, 2024 is 21 years based on actuarial assets and 23 years based on market assets. Assuming experience follows the actuarial assumptions, the amortization period is projected to decline.

3) Ultimate Goal

a) The Funding and Benefits Policy states: “It is the desire of the Board to fully fund the System. However, until the System becomes fully funded, any unfunded liabilities will be amortized over a closed period of no more than 30 years and funded as a level percent of pay. At such time as the System becomes fully funded and has as stabilization reserve of at least 10% of the actuarial accrued liability, the allowed amortization period for any subsequent unfunded liabilities will be reduced to a closed period of not greater than 20 years.”

b) Analysis: If all the assumptions are met, the amortization period on an actuarial value of asset basis is 21 years and is anticipated to decline.

4) Benefit Enhancements

- a) The Funding and Benefits Policy states: “Any recommendation for a benefit enhancement must include recommendations for necessary additional funding or other benefit reduction to cover any increase in normal cost arising from the recommended enhancement and to amortize any increase in the unfunded actuarial accrued liabilities arising from the recommended enhancement over a period not to exceed 25 years.

The Board will determine its position with respect to supporting or opposing legislation, on a case-by-case basis, and will apply this policy, actuarial funding standards, and other industry-standard information and resources it finds persuasive, as decision guides. The Board may not support legislation to enhance benefits if the funded ratio is less than 85%, and the amortization period is greater than 20 years.”

- b) Analysis: Since the funded ratio at July 1, 2024 of 74.26% is below 85% the Board’s Funding and Benefits policy does not currently support enhanced benefits.

SECTION 1 – SUMMARY OF FINDINGS

Sensitivity to Future Experience

The valuation results are projections based on the actuarial assumptions. Actual experience will differ from these assumptions, either increasing or decreasing the ultimate cost. The following illustrations provide simple analyses on how the costs are sensitive to changes in the assumed rate of return.

Investment Return – The investment return generally has the largest impact on the funding of the System.

| Impact of Assuming 1.0% Higher Investment Return | | | |
|--|---------------------|----------------------------|--|
| | <u>Funded Ratio</u> | <u>Amortization Period</u> | <u>Actuarially Determined Employer Contribution (Millions \$)*</u> |
| Current Assumption 7.30% | 74.26% | 21 Years | \$119.9 |
| Higher Assumption 8.30% | <u>82.28%</u> | <u>10 Years</u> | <u>57.7</u> |
| Change - Increase / (Decrease) | 8.02% | (11)Years | (\$62.2) |
| Impact of Assuming 0.5% Higher Investment Return | | | |
| | <u>Funded Ratio</u> | <u>Amortization Period</u> | <u>Actuarially Determined Employer Contribution (Millions \$)*</u> |
| Current Assumption 7.30% | 74.26% | 21 Years | \$119.9 |
| Higher Assumption 7.80% | <u>78.24%</u> | <u>14 Years</u> | <u>86.3</u> |
| Change - Increase / (Decrease) | 3.98% | (7) Years | (\$33.6) |
| Impact of Assuming 0.5% Lower Investment Return | | | |
| | <u>Funded Ratio</u> | <u>Amortization Period</u> | <u>Actuarially Determined Employer Contribution (Millions \$)*</u> |
| Current Assumption 7.30% | 74.26% | 21 Years | \$119.9 |
| Lower Assumption 6.80% | <u>70.35%</u> | <u>34 Years</u> | <u>148.8</u> |
| Change - Increase / (Decrease) | (3.91)% | 13 Years | \$28.9 |
| Impact of Assuming 1.0% Lower Investment Return | | | |
| | <u>Funded Ratio</u> | <u>Amortization Period</u> | <u>Actuarially Determined Employer Contribution (Millions \$)*</u> |
| Current Assumption 7.30% | 74.26% | 21 Years | \$119.9 |
| Lower Assumption 6.30% | <u>66.50%</u> | <u>62 Years</u> | <u>183.2</u> |
| Change - Increase / (Decrease) | (7.76)% | 41 Years | \$63.3 |

* Amounts reflect estimated increase/(decrease) in FY 2025 employer contributions only, in order to maintain the 21-year amortization period.

SECTION 1 – SUMMARY OF FINDINGS

The future funding status of the System will be determined by the System's experience. The System's actual asset returns and retirement rates, as well as member longevity, salary increases, withdrawal rates, disability rates and future legislation will all impact the funding status of the System. The entry age normal cost method and four-year smoothing of asset gains and losses will help to provide a more orderly funding of the System's liabilities but will not change the actual experience. The amortization period of the UAAL is not likely to decrease by the expected 1.0 year with each passing actuarial valuation. Instead, the amortization period is expected to decrease more or less than 1.0 year each year, reflecting gains and losses due to experience different than the actuarial assumptions.

Assumption Changes

There have been no assumption changes since the previous valuation that would have a material effect on the liabilities of the System.

Benefit Changes

There have been no benefit changes since the previous valuation that would have a material effect on the liabilities of the System.

Contribution Changes

There have been no contribution changes since the previous valuation.

Method Changes

There have been no method changes since the previous valuation.

SECTION 1 – SUMMARY OF FINDINGS

Impact of Changes

The following table summarizes how experience has changed the UAAL since the July 1, 2023 Actuarial Valuation. Further detail can be found in Tables 12 and 13.

Changes in the Unfunded Actuarial Accrued Liability (UAAL)

(In millions)

| | |
|--|---------------|
| July 1, 2023 Valuation UAAL | \$ 1,886.4 |
| Expected Decrease | <u>(22.9)</u> |
| Expected July 1, 2024 UAAL | \$ 1,863.5 |
| Experience Loss on Actuarial Liabilities | \$ 32.1 |
| Experience Gain on Actuarial Assets | (87.2) |
| Assumption & Method Changes | 0.0 |
| Plan Changes | <u>0.0</u> |
| Total Loss | <u>(55.1)</u> |
| July 1, 2024 Valuation UAAL | \$ 1,808.4 |

Summary

- * The System's actuarial value investment return of 9.09% for the year ended June 30, 2024 is 1.79% more than the actuarial assumption of 7.30%. This represents an asset gain of \$87.2 million due to investment return greater than anticipated. The actuarial value of assets is not allowed to be greater than 120% or less than 80% of the market value of assets. As of July 1, 2024, the market value of assets was \$5,151.9 million. As of July 1, 2024 the preliminary actuarial value of assets was \$5,217.2 million. Since the preliminary actuarial value is within the corridor no adjustment is required to the preliminary actuarial value of assets. The July 1, 2024 market value of assets is \$65.4 million less than the actuarial value of assets. This \$65.4 million will be recognized in future actuarial valuations unless it is offset by returns greater than the 7.30% assumption.
- * As of July 1, 2024 the amortization period of the UAAL is 21 years. Prior to this valuation the funding period was 24 years. The ultimate goal of the Board's Funding and Benefits Policy is to increase the current net funded ratio of 74.26% above 110% to encourage stable contribution rates.
- * The funding of the retirement system will be impacted by future experience which will sometimes be more favorable than the actuarial assumptions and sometimes less favorable. In particular, investment returns larger and smaller than the 7.30% assumption are expected to have significant impacts on the System's funding progress. In the long term, the favorable experience is needed to offset the less favorable experience. This is the reason for using an actuarial value of assets that smooths gains and losses over four years.
- * The unfunded actuarial accrued liability is amortized using a level percentage of payroll method over the amortization period. Under the level percentage of payroll method, amortization payments will not be large enough to cover interest on the UAAL in the beginning of the amortization schedule, which means that as a dollar amount, the UAAL is expected to grow. After a period of time, amortization payments will be large enough that the amortization payments will cover both interest and principal, and the UAAL as a dollar amount will be projected to decrease in each subsequent year. The payroll growth assumption is used to determine the percentage of payroll required over the remaining amortization period to fully amortize the UAAL. The payroll growth assumption is 3.25%.

Projected Progress Toward 100% Funding

The table below shows the projected progress toward reaching 100%. When the System is 100% funded the Unfunded Actuarial Accrued Liability will be fully amortized. This is scheduled to occur within 21 years. The ultimate goal of the TRS System is to become at least 100% funded and to establish a reserve equal to 10% of the System's Actuarial Accrued Liability.

SECTION 2 – ASSETS

In many respects, an actuarial valuation can be regarded as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is July 1, 2024. On that date, the assets available for the payment of benefits are appraised. These assets are compared with the actuarial liabilities. The actuarial process thus leads to a method of determining what contributions by members and their employers are needed to strike a balance.

The asset valuation method being used is a four-year smoothing method. The expected return is determined each year based on the beginning of year market value and actual cash flows during the year. Any difference between the expected market value return and the actual market value return is recognized evenly over a period of four years. The actuarial value of assets is not allowed to be greater than 120% or less than 80% of the market value of assets.

Table 1 lists the assets held and their market value for the past two years. Table 2 summarizes the fund's activity during the past two years. Table 3 summarizes the determination of the actuarial value of assets. Table 4 summarizes historical asset returns for the last 15 years including the amount recognized by the actuarial asset valuation method which was greater or lesser than the actuarial investment return assumption. Table 5 summarizes the historical asset returns since 2000 on market value and actuarial value basis. Table 5 also shows the assumed rate of return since 2000 which was reduced to 7.75%, 7.50%, and 7.30% in Fiscal Years Ending 2005, 2019, and 2023, respectively. Table 6 summarizes the historical asset values on a market value and actuarial value basis.

* Returns reflect all investment returns, including investment income and realized and unrealized investment gains and losses, and are net of investment expenses and administrative expenses paid by the System.

Table 5

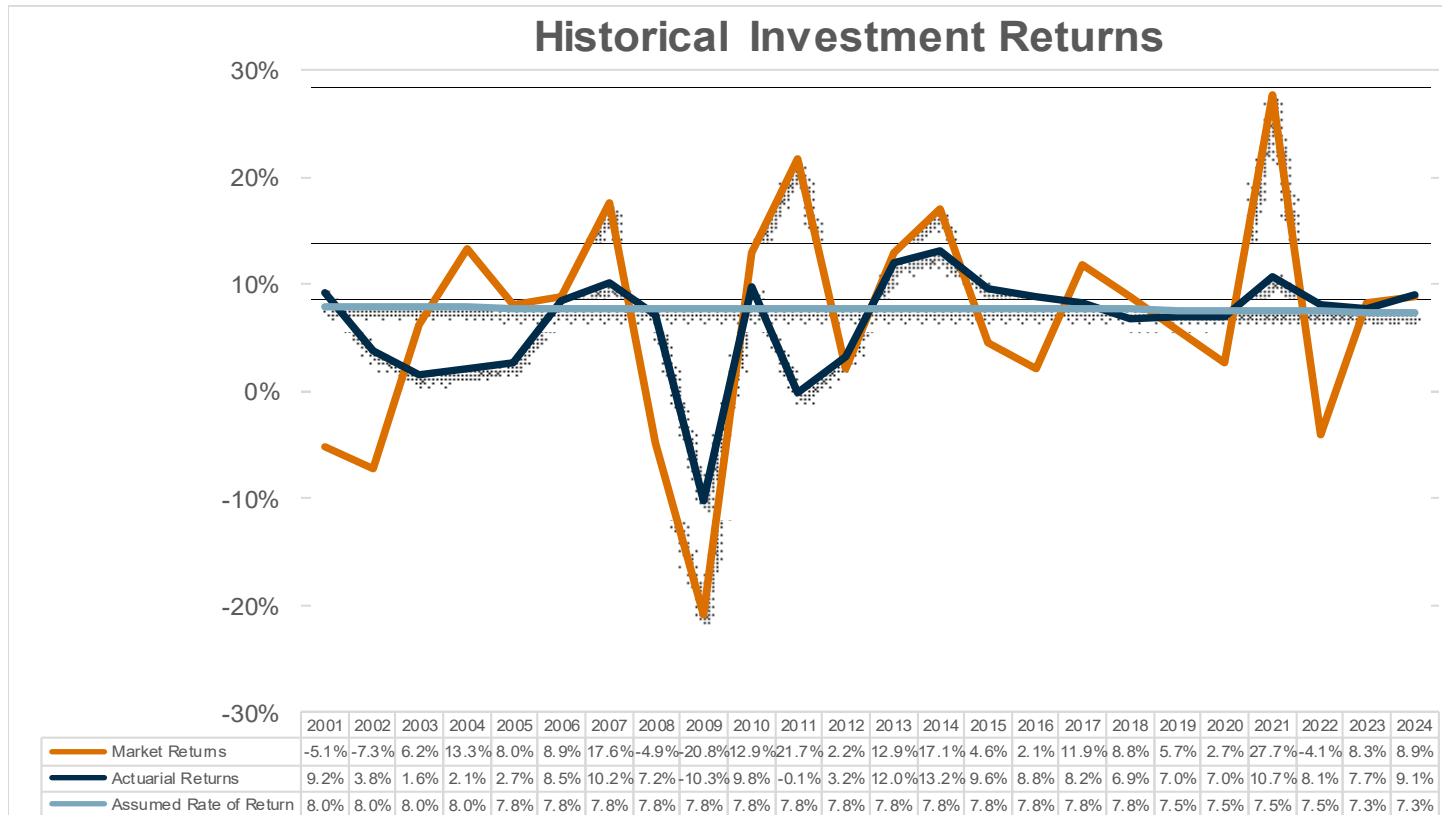

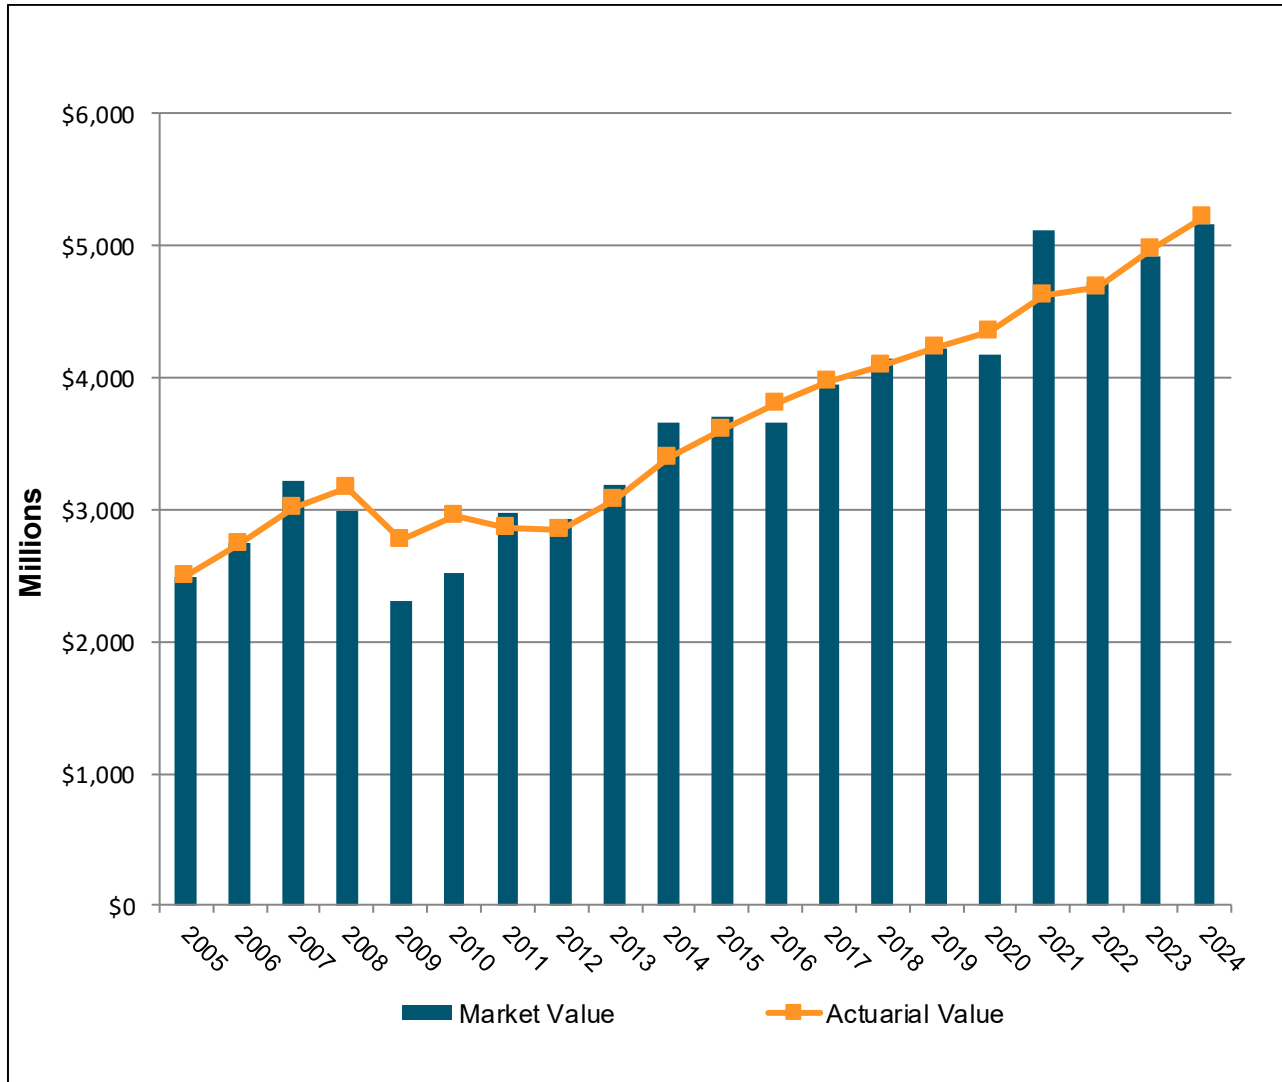

Table 6

Market Value of Assets vs. Actuarial Value of Assets

SECTION 3 – ACTUARIAL PRESENT VALUE OF FUTURE BENEFITS

In the previous section, an actuarial valuation was related to an inventory process and an analysis was given of the inventory of assets of the System as of the valuation date. In this section, the discussion will focus on the commitments of the System, which will be referred to as its actuarial liabilities.

Table 7 contains an analysis of the actuarial present value of all future benefits for contributing members, for former contributing members, and for beneficiaries. The analysis is given by type of benefit.

The actuarial liabilities summarized in Table 7 include the actuarial present value of all future benefits expected to be paid with respect to each member covered as of the valuation date. For an active member, this value includes a measure of both benefits already earned and future benefits to be earned. Thus, for all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and, if an optional benefit is chosen, for the lives of their surviving beneficiaries.

The actuarial valuation does not recognize liabilities for employees who become members and participate in the System after the valuation date.

SECTION 3 – ACTUARIAL PRESENT VALUE OF FUTURE BENEFITS

Table 7

Actuarial Present Value of Future Benefits for Contributing Members, Former Contributing Members, and Beneficiaries

(All amounts are actuarial present values in millions)

| | July 1, 2024 Total | July 1, 2023 Total |
|---|-----------------------|-----------------------|
| A. Active Members | | |
| Service Retirement | \$ 2,784.7 | \$ 2,755.7 |
| Disability Retirement | 20.1 | 19.8 |
| Survivors' Benefits | 31.1 | 31.0 |
| Vested Retirement | 107.3 | 94.4 |

| Beneficiaries* | 303.2 | 293.8 |
| Vested Terminated Members | 170.5 | 153.4 |
| Refund of Member Contributions | 17.0 | 15.9 |
| Total | \$ 4,980.4 | \$ 4,845.3 |
| C. Grand Total | \$ 7,938.4 | \$ 7,760.5 |

* Includes survivors of active and retired members and children's benefits

SECTION 4 – EMPLOYER CONTRIBUTIONS

In the previous two sections, attention has been focused on the assets and the present value of all future benefits of the System. A comparison of Tables 3 and 7 indicates that there is a shortfall in current actuarial assets to meet the present value of all future benefits for current members and beneficiaries.

In an active system, there will always be a difference between the assets and the present value of all future benefits. An actuarial valuation sets a schedule of future contributions that will deal with this funding in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. For this valuation, the entry age actuarial cost method has been used. A description of the entry age actuarial cost method is provided in Appendix A. Under this method, or essentially any actuarial cost method, the contributions required to meet the difference between current assets and the present value of all future benefits are allocated each year between two elements:

- A normal cost amount, which ideally is relatively stable as a percentage of salary over the years;
- An amount which is used to amortize the UAAL.

The two items described above, normal cost and UAAL, are the keys to understanding the actuarial cost method. Let us first discuss the normal cost.

The normal cost is the theoretical contribution rate, which will meet the ongoing costs of a group of average new employees. Suppose that a group of new employees were covered under a separate fund from which all benefits and to which all contributions and associated investment return were to be paid. Under the entry age actuarial cost method, the normal cost contribution rate is that level percentage of pay which would be exactly right to maintain this fund on a stable basis. If experience were to follow the actuarial assumptions exactly, the fund would be completely liquidated with the last payment to the last survivor of the group.

The assumed investment rate of return is 7.30%, net of investment and administrative expenses.

We have determined the normal cost rates separately by type of benefit under the System. These are summarized in Table 8.

The term "fully funded" is often applied to a system where contributions for everyone at the normal cost rate will fully pay for the benefits of existing as well as new employees. Often, systems are not fully funded, either because of benefit improvements in the past that have not been completely paid for or actuarial deficiencies that have occurred because experience has not been as anticipated. Under these circumstances, a UAAL exists.

SECTION 4 – EMPLOYER CONTRIBUTIONS

Table 9 shows how the UAAL was derived for the System. Lines A and B show, respectively, the total present value of future benefits and the portion of the future liability that is expected to be paid from future normal cost contributions, both employer and employee. Line C shows the actuarial accrued liability. Line D shows the amount of assets available for benefits. Line E shows the UAAL.

The amortization of the UAAL assumes university supplemental contributions are made as a percent of pay for members of the Montana University System Retirement Program (MUS-RP). Under Section 19-20-621, periodic separate valuations are to be performed to measure the liabilities of benefits to be paid under the Teachers' Retirement System (TRS) for MUS-RP members. The MUS-RP valuations calculate contribution rates that finance the university member benefits with university contributions and reflect actual experience including investment returns. In the prior valuations, the Supplemental Contribution of 4.72% of MUS-RP payroll was assumed to cease in 2033. It is our understanding the contribution will not stop unless legislative action is taken. The university supplemental contribution rate has varied from time to time. Recently it has varied as follows:

| Supplemental University Contribution Rate | Fiscal Years Ending |
|--|--------------------------------|
| 2.81% | June 30, 1998 |
| 3.12% | June 30, 1999 |
| 3.42% | June 30, 2000 |
| 3.73% | June 30, 2001 |
| 4.04% | June 30, 2002 to June 30, 2007 |
| 4.72% | After June 30, 2007 |

The UAAL at any date after establishment of a system is affected by any actuarial gains or losses arising when the actual experience of the system varies from the experience anticipated by the actuarial assumptions used in the valuations. To the extent actual experience as it develops differs from the assumptions used, so also will the actual emerging costs differ from the estimated costs. The impact of these differences in actual experience from the assumptions is included in Section 1, the Summary of Findings.

Table 8

**Normal Cost Contribution Rates
As Percentages of Salary**

| | July 1, 2024 Total | July 1, 2023 Total |
|--------------------------------|-------------------------------|-------------------------------|
| Service retirement | 8.86% | 8.93% |
| Disability retirement | 0.10% | 0.10% |
| Survivors' benefits | 0.14% | 0.14% |
| Vested retirement | 0.92% | 0.86% |
| Refund of member contributions | 0.74% | 0.72% |
| Total Normal Rate | 10.76% | 10.75% |
| Employee Normal Rate | 8.15% | 8.15% |
| Employer Normal Rate | 2.61% | 2.60% |

The normal rate for members hired on or after July 1, 2013 is 10.42%. As current members retire or terminate from the System and are replaced by new hires, the normal rate of the System will decline which will increase the amount of the employer contribution that is used to eliminate the unfunded actuarial accrued liability.

Table 9

Unfunded Actuarial Accrued Liability
(Dollar amounts in millions)

| | July 1, 2024 | July 1, 2023 |
|--|----------------|----------------|
| A. Actuarial present value of all future benefits for present and former members and their survivors (Table 7) | \$ 7,938.4 | \$ 7,760.5 |
| B. Less actuarial present value of total future normal costs for present members | <u>912.8</u> | <u>902.2</u> |
| C. Actuarial accrued liability | \$ 7,025.6 | \$ 6,858.3 |
| D. Less assets available for benefits | <u>5,217.2</u> | <u>4,971.9</u> |
| E. Unfunded actuarial accrued liability | \$ 1,808.4 | \$ 1,886.4 |

SECTION 5 – CASH FLOWS

The fundamental equation for funding a retirement system is that benefits and administrative expenses must be provided for by contributions (past and future) and investment income. When a retirement system matures, benefits and administrative expenses often exceed contributions. In this case we say the system has a “negative cash flow.” Mature systems are characterized by negative cash flows and large pools of assets. This is natural. Actuarial funding is designed to accumulate large pools of assets which will in turn provide investment income and finance negative cash flows when systems mature. If the fund is looked at as a whole, investment income is usually larger than the difference between contributions and benefit payments. The retirement system’s investment strategy should maximize potential returns at a prudent level of risk while providing for needed cash flows.

Table 10 shows the System had a positive cash flow for the year ended June 30, 2024. The System’s total cash flow including benefits payments and investment earnings was \$231.1 million. Of the \$231.1 million, \$(453.0) million was due to benefit payments, which were offset by \$255.4 in contributions and \$428.7 in investment returns. Table 11 shows the System is projected to have a positive cash flow in all future years.

As long as the System has a positive cash flow, there is no need to plan where the funds will come from to pay benefits since benefits can be paid by incoming contributions. A negative cash flow, as defined above, requires planning what funds will be used to pay the difference between benefits and contributions. We are providing these projections to aid in developing the investment strategy for the System’s assets.

Table 10

Cash Flow History
(Dollar amounts in millions)

| Year Ended June 30 | Benefits & Administrative Expenses | | | Net Cash Flow |
|--------------------|------------------------------------|----------|-------------------|---------------|
| | Contributions | Expenses | Investment Income | |
| 2014 | \$ 218.8 | \$ 292.1 | \$ 540.3 | \$ 467.0 |
| 2015 | 202.9 | 311.2 | 165.7 | 57.4 |
| 2016 | 205.3 | 328.4 | 71.5 | (51.6) |
| 2017 | 210.5 | 343.7 | 427.0 | 293.8 |
| 2018 | 214.8 | 361.2 | 343.7 | 197.3 |
| 2019 | 220.9 | 376.9 | 227.9 | 71.9 |
| 2020 | 228.6 | 393.5 | 112.6 | (52.3) |
| 2021 | 231.4 | 413.1 | 1,129.8 | 948.1 |
| 2022 | 243.4 | 428.4 | (207.4) | (392.4) |
| 2023 | 248.9 | 437.0 | 388.5 | 200.4 |
| 2024 | 255.4 | 453.0 | 428.7 | 231.1 |

Table 11

Cash Flow Projections
(Dollar amounts in millions)

| Year Ended June 30 | Projected Cash Flows | | | |
|--------------------|----------------------|------------------------------------|---------------------------|---------------|
| | Contributions | Benefits & Administrative Expenses | Assumed Investment Income | Net Cash Flow |
| 2025 | \$ 241.8 | \$ 495.4 | \$ 367.7 | \$ 114.1 |
| 2026 | 248.8 | 486.9 | 376.6 | 138.5 |
| 2027 | 256.1 | 496.6 | 386.7 | 146.2 |
| 2028 | 263.6 | 505.9 | 397.3 | 155.0 |
| 2029 | 271.4 | 515.3 | 408.5 | 164.6 |
| 2030 | 279.4 | 525.5 | 420.4 | 174.3 |
| 2031 | 287.6 | 535.5 | 433.1 | 185.2 |
| 2032 | 296.2 | 545.1 | 446.6 | 197.7 |
| 2033 | 305.0 | 554.1 | 461.0 | 211.9 |
| 2034 | 314.1 | 563.1 | 476.5 | 227.5 |

SECTION 6 – ACTUARIAL GAINS OR LOSSES

An analysis of actuarial gains or losses is performed in conjunction with all regularly scheduled valuations.

The development of the gains or losses related to the actuarial liability and the assets are shown in Table 12. The results of our analysis of the financial experience of the System in the three most recent regular actuarial valuations are presented in Table 13. Each gain or loss shown represents our estimate of how much the given type of experience caused the Unfunded Actuarial Accrued Liability or Funding Reserve to change in the period since the previous actuarial valuation.

Gains and losses shown due to demographic sources are approximate. Demographic experience is analyzed in greater detail in our periodic assumption studies.

Non-recurring gains and losses result from changes in the actuarial assumptions and benefit improvements.

SECTION 6 – ACTUARIAL GAINS OR LOSSES

Table 12

| 9. (Gain) / Loss | <u>\$ (87,218,909)</u> |
| C. UNFUNDED ACTUARIAL ACCRUED LIABILITY (GAIN) / LOSS ANALYSIS | |
| 1. Actual Unfunded Actuarial Accrued Liability as of June 30, 2023: | \$ 1,886,401,318 |
| 2. Normal Cost for this Plan Year: | 97,009,415 |
| 3. Contributions for this Plan Year: | (255,387,309) |
| 4. Interest on items 1 - 3: [(1+2) x 7.30% + (3 x 7.30% x .5)]: | 135,467,346 |
| 5. Expected Unfunded Actuarial Accrued Liability as of June 30, 2024: | <u>\$ 1,863,490,770</u> |
| 6. Changes due to: | |
| a. Assumption changes: | \$ 0 |
| b. Plan amendments: | 0 |
| c. Method changes: | 0 |
| d. Actuarial (Gain) / Loss: | (55,099,250) |
| 7. Actual Unfunded Actuarial Accrued Liability as of June 30, 2024: | <u>\$ 1,808,391,520</u> |

* Effects related to gains are shown in parentheses. Numerical results are expressed as a (decrease) increase in the Unfunded Actuarial Accrued Liability (UAAL). Gains decrease the UAAL and losses increase the UAAL.

Table 13

Historical Actuarial Gains or Losses*
(Dollar amounts in millions)

| | UAAL (Gain)/Loss | | |
|--|------------------|---------------|---------------|
| | June 30, 2024 | June 30, 2023 | June 30, 2022 |
| Investment Income | | | |
| Investment income was (greater) less than expected based on actuarial value of assets. | \$ (87.2) | \$ (16.8) | \$ (28.9) |
| Pay Increases | | | |
| Pay increases were (less) greater than expected. | 1.2 | (1.1) | 5.9 |
| Age & Service Retirements | | | |
| Members retired at (older) younger ages or with (less) greater final average pay than expected | 28.0 | 26.9 | 27.0 |
| Disability Retirements | | | |
| Disability claims were (less) greater than expected | - | - | 0.3 |
| Death-in-Service Benefits | | | |
| Survivor claims were (less) greater than expected | (0.1) | (0.5) | (0.5) |
| Withdrawal From Employment | | | |
| (More) less reserves were released by withdrawals than expected | 17.0 | 16.4 | 17.6 |
| Death After Retirement | | | |
| Retirees (died younger) lived longer than expected | 9.8 | 5.3 | 8.3 |
| Data Adjustments and Benefit Payment Timing | | | |
| Service purchases, data corrections, etc. | (25.1) | (24.8) | (40.2) |
| Other | | | |
| Miscellaneous (gains) and losses | 1.3 | 6.4 | (0.3) |
| Total (Gain) or Loss During Period From Financial Experience | \$ (55.1) | \$ 11.8 | \$ (10.8) |
| Non-Recurring Items. | | | |
| Changes in actuarial assumptions and methods | - | - | 78.1 |
| Changes in benefits caused a (gain) loss | - | - | - |
| Composite (Gain) Loss During Period | \$ (55.1) | \$ 11.8 | \$ 67.3 |

* Effects related to gains are shown in parentheses. Numerical results are expressed as a (decrease) increase in the Unfunded Actuarial Accrued Liability (UAAL). Gains decrease the UAAL and losses increase the UAAL.

SECTION 7 – RISK CONSIDERATIONS

A typical retirement plan faces many different risks, but the greatest risk is the inability to make benefit payments when due. If plan assets are depleted, benefits may not be paid which could create legal and litigation risk or the plan could become “pay as you go.” The term “risk” is most commonly associated with an outcome with undesirable results. However, in the actuarial world, risk can be translated as uncertainty. The actuarial valuation process uses many actuarial assumptions to project how future contributions and investment returns will meet the cash flow needs for future benefit payments. Of course, we know that actual experience will not unfold exactly as anticipated by the assumptions and that uncertainty, whether favorable or unfavorable, creates risk. ASOP 51 defines risk as the potential of actual future measurements to deviate from expected results due to actual experience that is different than the actuarial assumptions.

The various risk factors for a given plan can have a significant impact – positive or negative – on the actuarial projection of liability and contribution rates.

There are a number of risks inherent in the funding of a defined benefit plan. These include:

- economic risks, such as investment return and price inflation;
- demographic risks such as mortality, payroll growth, aging population including impact of baby boomers, and retirement ages;
- contribution risk, i.e., the potential for contribution rates to be too high for the plan sponsor/employer to pay and
- external risks such as the regulatory and political environment.

There is a direct correlation between healthy, well-funded retirement plans and consistent contributions that are sufficient to fund the System. The System is primarily funded by member, employer, and State contributions to the trust fund, together with the earnings on these accumulated contributions. These contributions fund benefit accruals for current active members and administrative expenses. The remainder of the contributions amortizes the unfunded actuarial accrued liability. The contributions are set in statute and are intended to provide the needed amounts to fund the System over time. The purpose of the valuation is to determine if these contributions are sufficient to fund the System. Due to the fixed nature of the contributions, actuarial gains and losses are reflected in the amortization period. Generally, the largest source of actuarial gains and losses are caused by investment volatility. In addition, the unfunded liability is amortized as a level percentage of pay assuming payroll will grow by 3.25% per year. A key risk factor to the System’s funding is that over time, the Statutory Contribution Rates will be insufficient to accumulate enough funds, with investment income, to fund the promised benefits. The funding insufficiency can be caused by amortization periods that are too long or by payroll not growing at the assumed rate.

SECTION 7 – RISK CONSIDERATIONS

The other significant risk factor for the System is investment return because of the volatility of returns and the size of plan assets compared to payroll. This is to be expected, given the underlying capital market assumptions and the System's asset allocation. To the extent that the investment return on the market value of assets cannot achieve the assumed investment rate of return, there is a risk of change to the discount rate which determines the present value of liabilities and actuarial valuation results. Please see the summary of results of this report which demonstrates the sensitivity of valuation results to differing discount rates.

Under the revised Actuarial Standards of Practice (ASOP) No. 4 effective for valuations after February 15, 2023, we include a low-default-risk obligation measure of the System's liability in our funding valuation report. This is an informational disclosure as described below and would not be appropriate for assessing the funding progress or health of the plan. This measure uses the unit credit cost method and reflects all the assumptions and provisions of the funding valuation except that the discount rate is derived from considering low-default-risk fixed income securities. We considered the FTSE Pension Discount Curve based on market bond rates published by the Society of Actuaries as of June 30, 2024 and with the 30-year spot rate used for all durations beyond 30. Using these assumptions, we calculate a liability of \$7,900.6 million. This amount approximates the termination liability if the plan (or all covered employment) ended on the valuation date and all of the accrued benefits had to be paid with cash-flow matched bonds. This assurance of funded status and benefit security is typically more relevant for corporate plans than for governmental plans since governments rarely have the need or option to completely terminate a plan.

A key demographic risk for the Retirement System is improvements in mortality (longevity) greater than anticipated. While the actuarial assumptions reflect a margin for improvement in mortality experience these assumptions are refined every experience study, the risk arises because there is a possibility of some sudden shift, perhaps from a significant medical breakthrough that could quickly increase liabilities. Likewise, there is some possibility of a significant public health crisis that could result in a significant number of additional deaths in a short time period, which would also be significant, although more easily absorbed. While either of these events could happen, it represents a small probability and thus represents much less risk than the volatility associated with investment returns.

The exhibits on the following pages summarize some historical information that helps indicate how certain key risk metrics have changed over time. Many are due to the maturing of the retirement system.

SECTION 7 – RISK CONSIDERATIONS

Historical Asset Volatility Ratios

As a retirement system matures, the size of the market value of assets increases relative to the covered payroll of active members, on which the System is funded. The size of the plan assets relative to covered payroll, sometimes referred to as the asset volatility ratio, is an important indicator of the contribution risk for the System. The higher this ratio, the more sensitive a plan's contribution rate is to investment return volatility. In other words, it will be harder to recover from investment losses with increased contributions.

| Actuarial Valuation Date | Market Value of Assets | Estimated Plan Year Payroll | Asset Volatility Ratio |
|---|-----------------------------------|--|---------------------------------------|
| 7/1/2016 | 3,656,830,798 | 795,920,906 | 4.59 |
| 7/1/2017 | 3,950,704,563 | 818,122,561 | 4.83 |
| 7/1/2018 | 4,148,324,206 | 829,708,595 | 5.00 |
| 7/1/2019 | 4,220,285,752 | 857,467,932 | 4.92 |
| 7/1/2020 | 4,167,839,558 | 880,667,830 | 4.73 |
| 7/1/2021 | 5,116,849,108 | 922,764,585 | 5.55 |
| 7/1/2022 | 4,724,449,484 | 960,836,370 | 4.92 |
| 7/1/2023 | 4,920,843,113 | 983,749,464 | 5.00 |
| 7/1/2024 | 5,151,867,830 | 1,003,130,307 | 5.14 |

The assets at July 1, 2024 are 514% of payroll, so underperforming the investment return assumption by 1.00% (i.e., earn 6.30% for one year) is equivalent to 5.14% of payroll. While the actual impact in the first year is mitigated by the asset smoothing method and amortization of the UAAL, this illustrates the risk associated with volatile investment returns.

SECTION 7 – RISK CONSIDERATIONS

Historical Cash Flows

Plans with negative cash flows will experience increased sensitivity to investment return volatility. Cash flows, for this purpose, are measured as contributions less benefit payments. If the System has negative cash flows and then experiences returns below the assumed rate, there are fewer assets to be reinvested to earn the higher returns that typically follow. While any negative cash flow will produce such a result, it is typically a negative cash flow of more than 5% of MVA that may cause significant concerns. The System has negative cash flows which have been growing over the prior seven years. This trend needs to be monitored going forward.

| Fiscal Year End | Market Value of Assets (MVA) | Contributions | Benefit Payments | Net Cash Flow | Net Cash Flow as a Percentage of MVA |
|------------------------|-------------------------------------|----------------------|-------------------------|----------------------|---|
| 6/30/2016 | 3,656,830,798 | 205,286,917 | 328,215,892 | (122,928,975) | (3.36%) |
| 6/30/2017 | 3,950,704,563 | 210,520,833 | 343,448,519 | (132,927,686) | (3.36%) |
| 6/30/2018 | 4,148,324,206 | 214,833,474 | 361,026,194 | (146,192,720) | (3.52%) |
| 6/30/2019 | 4,220,285,752 | 220,949,305 | 376,738,054 | (155,788,749) | (3.69%) |
| 6/30/2020 | 4,167,839,558 | 228,563,253 | 393,336,385 | (164,773,132) | (3.95%) |
| 6/30/2021 | 5,116,849,108 | 231,360,444 | 412,724,347 | (181,363,903) | (3.54%) |
| 6/30/2022 | 4,724,449,484 | 243,408,557 | 428,240,043 | (184,831,486) | (3.91%) |
| 6/30/2023 | 4,920,843,113 | 248,904,126 | 436,952,114 | (188,047,988) | (3.82%) |
| 6/30/2024 | 5,151,867,830 | 255,387,309 | 453,013,125 | (197,625,816) | (3.84%) |

Liability Maturity Measurement

Most public sector retirement systems have been in operation for many years. As a result, they have aging plan populations, and in some cases declining active populations, resulting in an increasing ratio of retirees to active members and a growing percentage of retiree liability. The retirement of the remaining baby boomers over the next decade is expected to further exacerbate the aging of the retirement system population. As more of the total liability begins to reside with retirees, investment volatility has a greater impact on the funding of the system since it is more difficult to restore the system financially after losses occur when there is comparatively less payroll over which to spread costs. Below are two tables which demonstrate the ratio of the System's retiree liability compared to the total accrued liability and the ratio of the number of retirees and beneficiaries to the number of active members.

| Valuation Date | Retiree Liability (a) | Total Actuarial Accrued Liability (b) | Retiree Percentage (a) / (b) |
|-----------------------|------------------------------|--|-------------------------------------|
| 7/1/2016 | 3,748,186,878 | 5,483,673,777 | 68.4% |
| 7/1/2017 | 3,888,518,484 | 5,636,841,900 | 69.0% |
| 7/1/2018 | 4,223,371,459 | 6,004,434,112 | 70.3% |
| 7/1/2019 | 4,350,787,062 | 6,148,556,456 | 70.8% |
| 7/1/2020 | 4,509,517,581 | 6,310,005,115 | 71.5% |
| 7/1/2021 | 4,622,070,514 | 6,463,246,950 | 71.5% |
| 7/1/2022 | 4,704,836,476 | 6,691,274,850 | 70.3% |
| 7/1/2023 | 4,845,296,148 | 6,858,305,970 | 70.6% |
| 7/1/2024 | 4,980,403,478 | 7,025,624,963 | 70.9% |

Historical Member Statistics

| Valuation Date | Number of | | Active/Retired |
|-----------------------|------------------|----------------|-----------------------|
| | Active | Retired | |
| 2016 | 19,048 | 15,164 | 1.26 |
| 2017 | 18,917 | 15,566 | 1.22 |
| 2018 | 19,267 | 15,933 | 1.21 |
| 2019 | 19,686 | 16,256 | 1.21 |
| 2020 | 19,751 | 16,605 | 1.19 |
| 2021 | 19,658 | 16,985 | 1.16 |
| 2022 | 19,975 | 17,369 | 1.15 |
| 2023 | 19,978 | 17,707 | 1.13 |
| 2024 | 20,138 | 18,002 | 1.12 |

APPENDIX A – ACTUARIAL PROCEDURES AND ASSUMPTIONS

The assumptions for investment return, price inflation, wage inflation, mortality, retirement and withdrawal reflect the experience study for the period ending July 1, 2021 adopted by the Board in May 2022.

The current asset valuation method was adopted for the July 1, 2007 valuation.

Tables A-3 through A-5 give rates of decrement for service retirement, disablement, other terminations of employment, and probability of remaining membership.

Actuarial Cost Method

The actuarial valuation was prepared using the entry age actuarial cost method. Under this method, the actuarial present value of the projected benefits of each individual included in the valuation is allocated as a level percentage of the individual's projected compensation between entry age and assumed exit. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The normal cost was first calculated for each individual member. The normal cost rate is defined to equal the total of the individual normal costs, divided by the total pay rate.

The portion of this actuarial present value not provided for at a valuation date by the sum of (a) the actuarial value of the assets and (b) the actuarial present value of future normal costs is called the UAAL. The UAAL is amortized as a level percentage of the projected salaries of present and future members of the System.

Records and Data

The data used in the valuation consist of financial information; records of age, sex, service, salary, contribution rates, and account balances of contributing members; and records of age, sex, and amount of benefit for retired members and beneficiaries. All of the data were supplied by the System and are accepted for valuation purposes without audit.

Replacement of Terminated Members

The ages at entry and distribution by sex of future members are assumed to average the same as those of the present members they replace. If the number of active members should increase, it is further assumed that the average entry age of the larger group will be the same, from an actuarial standpoint, as that of the present group. Under these assumptions, the normal cost rates for active members will not vary with the termination of present members.

Employer Contributions

At the time of this valuation, the total employer contribution rate for normal costs and amortization of the UAAL was 11.96% of members' salaries.

Administrative and Investment Expenses

The administrative and investment expenses of the System are assumed to be funded by investment earnings in excess of 7.30% per year.

Valuation of Assets - Actuarial Basis

The actuarial asset valuation method spreads asset gains and losses over four years. The expected return is determined each year based on the beginning of year market value and actual cash flows during the year. Any difference between the expected market value return and the actual market value return is recognized evenly over a period of four years. The actuarial value of assets is not allowed to be greater than 120% or less than 80% of the market assets. (Adopted effective July 1, 2007.)

Investment Earnings

The annual rate of investment earnings of the assets of the System is assumed to be 7.30% per year net of administrative and investment expenses, compounded annually. (Adopted effective May 2022.)

Interest on Member Contributions

Interest on member contributions is assumed to accrue at a rate of 4.25% per annum, compounded annually. This assumption was set as of July 1, 2024.

Postretirement Benefit Increases

Tier 1 Members:

On January 1 of each year, the retirement allowance payable is increased by 1.5% if the retiree has received benefits for at least 36 months prior to January 1 of the year in which the adjustment is to be made.

Tier 2 Members:

On January 1 of each year, the retirement allowance payable is assumed to increase by 0.5% if the retiree has received benefits for at least 36 months prior to January 1 of the year in which the adjustment is to be made.

Future Salaries

The rates of annual salary increase assumed for the purpose of the valuation are illustrated in Table A-2. In addition to increases in salary due to merit and longevity, this scale includes an assumed 3.50% annual rate of increase in the general wage level of the membership. The merit and longevity increases for the MUS members did not show a pattern of increasing or decreasing with service at the time of our most recent study. Therefore, the MUS members have a flat 0.75% merit and longevity assumption. The general wage increase assumption and merit and longevity scales were adopted in May 2022.

Montana University System (MUS) members are assumed to have a 0.63% higher average final compensation to account for the larger than average annual compensation increases observed in the years immediately preceding retirement.

Service Retirement

Table A-3 shows the annual assumed rates of retirement among members eligible for service retirement. Separate rates are used when a member is eligible for reduced benefits, for the first year a member is eligible for full benefits, and for the years following the first year a member is eligible for full benefits. The rates were adopted May 2022.

Disablement

The rates of disablement used in this valuation are illustrated in Table A-4. These rates were adopted May 2010.

Mortality

A written description of each mortality table used in this valuation is included in Table A-1. These rates were adopted May 2022.

Other Terminations of Employment

The rates of assumed future withdrawal from active service for reasons other than death, disability or retirement are shown for representative ages in Table A-5. These rates were adopted May 2022.

Part-Time Employees

The valuation data for active members identifies part-time members. For part-time members earning more than \$1,000, total credited service is adjusted based on the ratio of actual earnings to annualized earnings. The liability and normal cost calculations for these members are based on the adjusted service and actual earnings for the prior year.

Part-time members earning less than \$1,000 during the last year were valued at their current member contribution balance.

Montana University System Retirement Program (MUS-RP)

MUS-RP payroll as of June 30, 2024 was \$308,758,667.

Effective for fiscal years after June 30, 2007, the MUS-RP contribution rate is 4.72%, pursuant to MCA 19-20-621. It is our understanding the contribution will not stop unless legislative action is taken.

Buybacks, Purchase of Service, and Military Service

The active liabilities and normal cost (excluding liabilities and normal cost in respect of Return of Employee Contributions) were increased to 100.5% of their original value to fund this additional service based on a study of the System's experience for the five calendar years 1995 through 1999. This was effective July 1, 2008.

Probability of Marriage & Dependent Children

If death occurs in active status, all members are assumed to have an eligible surviving spouse and two children. The spouse is assumed to be the same age as the member. For members who die prior to age 50, dependent children are assumed to be eight years old. For members who die after age 50 but prior to age 55, children are assumed to be 13 years old. Members who die after age 55 are assumed to have no dependent children under the age of 18.

Records with no Birth Date

New records with no birth date are assumed to be 25 years old. Records that are not new and have no birth date used the same birth date as the prior year's valuation.

Table A-1

Summary of Valuation Assumptions

| | |
|---|-----------|
| I. Economic assumptions | |
| A. General wage increases* | 3.50% |
| B. Investment return | 7.30% |
| C. Price Inflation Assumption | 2.75% |
| D. Payroll Growth Assumption | 3.25% |
| E. Growth in membership | 0.00% |
| F. Postretirement benefit increases (Starting three years after retirement) | |
| Tier One | 1.50% |
| Tier Two | 0.50% |
| G. Interest on member accounts | 4.25% |
| II. Demographic assumptions | |
| A. Individual salary increase due to promotion and longevity | Table A-2 |
| B. Retirement | Table A-3 |
| C. Disablement | Table A-4 |
| D. Mortality among contributing members. | |
| PUBT-2010 Employee mortality table projected to 2021. Projected generationally using MP-2021. | |
| E. Mortality among service retired members. | |
| PUBT-2010 Retiree mortality table projected to 2021 adjusted 102% for males and 103% for females. Projected generationally using MP-2021. | |
| F. Mortality among beneficiaries. | |
| PUB-2010 Contingent Survivor table projected to 2021. Projected generationally using MP-2021. | |
| G. Mortality among disabled members. | |
| PUB-2010 Non-Safety Disabled Retiree mortality table projected to 2021. | |
| H. Other terminations of employment | Table A-5 |

* Montana University System (MUS) members are assumed to have a 0.63% higher average final compensation to account for the larger than average annual compensation increases observed in the years immediately preceding retirement.

Table A-2

Future Salaries

| Years of Service | General Members | | | University Members | | |
|------------------|------------------------------|-----------------------|-----------------------|------------------------------|-----------------------|-----------------------|
| | Individual Merit & Longevity | General Wage Increase | Total Salary Increase | Individual Merit & Longevity | General Wage Increase | Total Salary Increase |
| 1 | 5.50% | 3.50% | 9.00% | 0.75% | 3.50% | 4.25% |
| 2 | 4.50 | 3.50 | 8.00 | 0.75 | 3.50 | 4.25 |
| 3 | 3.50 | 3.50 | 7.00 | 0.75 | 3.50 | 4.25 |
| 4 | 3.50 | 3.50 | 7.00 | 0.75 | 3.50 | 4.25 |

Effective Date

September 1, 1937.

Vesting Period

Five years. No benefits are payable unless the member has a vested right, except the return of employee contributions with interest.

Tier One Member

A person who became a member before July 1, 2013 and who has not withdrawn the member's account balance.

Tier Two Member

A person who became a member on or after July 1, 2013, or who after withdrawing the member's account balance, became a member again after July 1, 2013.

Final Compensation

Tier One Members

Average of highest three consecutive years of earned compensation.

Tier Two Members

Average of highest five consecutive years of earned compensation.

Normal Form of Benefits

Life only annuity. All benefits cease upon death; however, in no event will the member receive less than the amount of employee contributions with interest.

Normal Retirement Benefits

Tier One Members

- Eligibility:** 25 years of service or age 60 with five years of service.
- Benefit:** The retirement benefit is equal to 1/60 of final compensation for each year of service.

Tier Two Members

- Eligibility:** Age 55 with 30 years of service or age 60 with five years of service.
- Benefit:** A member age 60 with at least 30 years of creditable service will receive a retirement allowance equal to 1.85% of final compensation for each year of service. Otherwise, the multiplier used to calculate the retirement allowance will equal 1/60 of final compensation for each year of service.

Early Retirement Benefits

Tier One Member

- Eligibility:** Five years of service and age 50.
- Benefit:** The retirement benefit is calculated in the same manner as described for normal retirement, but the benefit is actuarially reduced by the lesser of the number of years equal to the age of the participant at the early retirement subtracted from age 60 or the number of years of service at early retirement subtracted from 25 years of service.

Tier Two Member

- Eligibility:** Five years of service and age 55.
- Benefit:** The retirement benefit is calculated in the same manner as described for normal retirement, but the benefit is actuarially reduced by the lesser of the number of years equal to the age of the participant at the early retirement subtracted from age 60 or the number of years of service at early retirement subtracted from 30 years of service.

Death Benefit

| | |
|--------------|--|
| Eligibility: | Five years of service. |
| Benefit: | The death benefit is equal to 1/60 of final compensation for each year of service accrued at date of death, with an actuarial adjustment based on the relation of the member's age at death to the beneficiary's age. A monthly benefit of \$200 is paid to each child until age 18. In addition, a lump-sum benefit of \$500 is paid upon the death of an active or retired member. |

Disability Benefit

| | |
|--------------|--|
| Eligibility: | Five years of service. |
| Benefit: | The disability benefit is equal to 1/60 of final compensation for each year of service accrued at date of disability. The minimum benefit is 1/4 of the final compensation. A Tier Two Member is not eligible for a disability retirement if the member is or will be eligible for a service retirement on or before the member's date of determination. |

Withdrawal Benefits

With less than five years of service, the accumulated employee contributions with interest are returned. With more than five years, the member may elect a refund of contributions with interest or leave the contributions and interest in the System and retain a vested right to retirement benefits.

Contributions

Tier One Member: 7.15% of compensation. Tier One members are required to contribute a Supplemental Contribution equal to an additional 1% of compensation. The Board may decrease the Supplemental Contribution if the average funded ratio of the System based on the last three actuarial valuations is equal to or greater than 90% and the period necessary to amortize the unfunded liabilities of the System based on the most recent actuarial valuation is less than 15 years. Following one or more decreases in the supplemental contribution the Board may increase the supplemental contribution to a rate not to exceed 1% if the average funded ratio of the System based on the last three annual actuarial valuations is equal to or less than 80% and the period necessary to amortize all liabilities of the System based on the most recent annual actuarial valuation is greater than 20 years.

Tier Two Member: 8.15% of compensation. The Board may require a Tier Two member to contribute a Supplemental Contribution if the average funded ratio of the System based on the last three actuarial valuations is equal to or less than 80% and the period necessary to amortize the unfunded actuarial accrued liability is greater than 20 years and a State or employer contribution rate increase or a flat dollar contribution to the System has been enacted which is equivalent to or greater than the Supplemental Contribution Rate imposed by the Board. A single Tier Two Supplemental Contribution Rate increase cannot exceed 0.5% of compensation and in total cannot exceed 9.15% of compensation. The Board may decrease the Supplemental Contribution if the average funded ratio of the System based on the previous three annual actuarial valuations is equal to or greater than 90%; and the period necessary to amortize the unfunded actuarial accrued liability is less than 15 years.

Employer: 9.96% of compensation. Employers are required to contribute a supplemental contribution equal to 1% for fiscal year 2014 and increase by 0.1% each fiscal year through 2024. The Board may decrease the Employer Supplemental Contribution if the average funded ratio of the System based on the last three actuarial valuations is equal to or greater than 90% and the period necessary to amortize the unfunded actuarial accrued liability based on the most recent valuation is less than 15 years and the GABA has been increased to the maximum allowable. Following one or more decreases in the Supplemental Contribution Rate the Board may increase the Supplemental Contribution Rate to a rate not to exceed 1% if the average funded ratio of the System based on the last three actuarial valuations is equal to or less than 80% and the period necessary to amortize the unfunded actuarial accrued liability is greater than 20 years.

MCA 19-20-604 specifies that the employer contribution rate will be reduced by 0.11% when the amortization period of the System's UAAL is 10 years or less according to the System's latest actuarial valuation.

State Supplemental Contribution: \$25 million per year on an annual basis payable on July 1st of each year.

Re-employed Retirees: Each employer is required to contribute 9.85% of total compensation paid to all re-employed TRS retirees employed in a TRS reportable position. This amount shall increase by 1.00% for fiscal year 2014 and increase by 0.10% each fiscal year through 2024 until the total employer contribution is equal to 11.85% of re-employed retiree compensation.

Interest on Member Contributions

Effective July 1, 2024, the interest credited on member contributions increased from 4.00% to 4.25% per annum.

Guaranteed Annual Benefit Adjustment (GABA)

On January 1 of each year, if the retiree has received benefits for at least 36 months prior to January 1 of the year in which the adjustment is to be made, for Tier One Members, the retirement allowance will be increased by 1.5%.

For Tier Two Members, the retirement allowance will be increased by an amount equal to or greater than 0.5% but no more than 1.5% if the most recent actuarial valuation shows the System to be at least 90% funded and the provisions of the increase is not projected to cause the funded ratio to be less than 85%.

APPENDIX C – VALUATION DATA

This valuation is based upon the membership of the System as of July 1, 2024. Membership data were supplied by the System and accepted for valuation purposes without audit. However, tests were performed to ensure that the data are sufficiently accurate for valuation purposes.

| Active Members | Number | Annual Salaries in Millions |
|--|--------------|--------------------------------|
| Full-Time Members | 13,709 | \$ 838.3 |
| Part-Time Members* | <u>5,939</u> | <u>115.2</u> |
| Total Contributing Members* | 19,648 | \$ 953.5 |
| Active Members with Annual Compensation less than \$1,000 | 490 | |
| Total Active Members | 20,138 | |

* Excludes part-time members with annual compensation less than \$1,000.

Table C-1 contains summaries of the data for contributing members. For full-time members, values shown in the tables are the numbers of members and their total and average annual salaries. For part-time members, only the numbers of members are shown.

Table C-2 presents distributions of the following:

- Members receiving service retirement benefits.
- Members receiving disability retirement benefits.
- Survivors of deceased retired members receiving benefits.
- Survivors of deceased active members.
- Child beneficiaries.
- Terminated vested members.

Table C-3 is a reconciliation of membership data from July 1, 2023 to July 1, 2024.

APPENDIX C – VALUATION DATA

The following is a summary of retired members and beneficiaries currently receiving benefits:

| Type of Annuitant | Number | Annual Benefits in Thousands | Average Annual Benefits |
|---|--------|---------------------------------|-------------------------------|
| Service Retirement | 15,709 | \$ 421,811 | \$ 26,852 |
| Survivors of Deceased Retired Members* | 1,629 | 31,553 | 19,370 |
| Total Service Retirement (including survivors) | 17,338 | \$ 453,364 | \$ 26,149 |
| Disability Retirement | 163 | 2,192 | 13,448 |
| Survivors of Deceased Active Members | 488 | 5,675 | 11,630 |
| Child Beneficiaries | 13 | 31 | 2,403 |
| Total Annuitants | 18,002 | \$ 461,262 | \$ 25,623 |

| Terminated Members with Contributions Not Withdrawn | Number |
|--|--------|
| Vested Terminated Members | 2,339 |
| Non-Vested Terminated Members | 6,116 |
| Total Terminated Members | 8,455 |

| Deceased Members Pending Account Settlement | Number |
|--|--------|
| Active/Terminated Deceased Pending | 370 |
| Retired Deceased Pending | 26 |
| Total Deceased Pending | 396 |

* Includes 154 Alternate Payees

APPENDIX D – COMPARATIVE SCHEDULES

This section contains tables that summarize the experience of the System shown in present and past valuation reports.

Table D-1 shows a summary of the active members covered as of the various valuation dates.

Table D-2 shows a summary of the retired and inactive members as of the various valuation dates.

Table D-3 summarizes the contribution rates determined by each annual actuarial valuation.

Table D-1

Active Membership Data

¹ Effective July 1, 2014 through July 1, 2021, the Normal Cost Rate includes the administrative expense load.

² The UAAL rate is the amount available to amortize the UAAL. It is equal to the total contribution rate, minus the normal cost rate.

³ The 1999 Legislation which passed the 1.5% GABA, also added a 0.11% state general fund contribution.

The following definitions are largely excerpts from a list adopted in 1981 by the major actuarial organizations in the United States. In some cases the definitions have been modified for specific applicability to the Montana Teachers' Retirement System. Defined terms are capitalized throughout this Appendix.

Accrued Benefit

The amount of an individual's benefit (whether or not vested) as of a specific date, determined in accordance with the terms of a pension plan and based on compensation and service to that date.

Actuarial Accrued Liability

That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.

Actuarial Assumptions

Assumptions as to the occurrence of future events affecting pension costs, such as: mortality, withdrawal, disablement, and retirement; changes in compensation, rates of investment earnings, and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

Actuarial Cost Method

A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Accrued Liability.

Actuarial Gain (Loss)

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions during the period between two Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.

Actuarial Present Value

The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions.

Actuarial Valuation

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a pension plan.

Actuarial Value of Assets

The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.

Actuarially Equivalent

Of equal Actuarial Present Value, determined as of a given date with each value based on the same set of Actuarial Assumptions.

Amortization Payment

That portion of the pension plan contribution which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

Entry Age Actuarial Cost Method

A method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.

Market Value of Assets

The fair value of cash, investments and other property belonging to a pension plan that could be acquired by exchanging them on the open market.

Normal Cost

That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method.

Projected Benefits

Those pension plan benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits.

Unaccrued Benefit

The excess of an individual's Projected Benefits over the Accrued Benefits as of a specified date.

Unfunded Actuarial Accrued Liability

The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.
